

Postdoctoral Research Fellow

A postdoctoral position is immediately available in cardiovascular research area at the University of Central Florida, Orlando.

The lab is seeking a highly motivated postdoctoral research fellow to join a multidisciplinary research team studying the molecular mechanisms of heart failure. The lab uses multiple approaches to understand metabolism, transcriptome, post-translational modifications and signaling of heart failure. We are also developing a novel therapeutic approach to overcome drug-induced cardiotoxicity or protein induced proteotoxicity using mice models.

Qualifications

- A Ph.D. in cardiovascular sciences or related field is required.
- Strong expertise in laboratory techniques related to molecular biology, biochemistry, cell signaling and imaging is required.
- Preference will be given to applicant with some experience in live animal surgery. The candidate should have demonstrated ability to write and publish results in reputed journals.

If you are interested, please email CV with three reference letters to Manish.Gupta@ucf.edu.

Applications will be evaluated until the position is filled.
