

SHARE Program

The SHARE Program is a National Institutes of Health (NIAAA) funded (1P01AA029547) center program to address HIV and alcohol use management in emerging adults. The program consists of three research projects (DEFINE, ENGAGE, and SUSTAIN), representing different stages on the translational science spectrum and targeting different core competencies, supported by three cores (Administrative Core, Community Engagement Core, and Data Science Core)

WHAT WILL PARTICIPANTS BE ASKED TO DO?

After screening for eligibility, participants will be randomly assigned to one of the three projects.

- 1 Provide HIV Viral Load (via Release of Information from provider, as a document upload, or through an at-home test kit)
- 2 Sign HIPAA Authorization to access public surveillance data
- 3 Participants will only complete the activities under the project they're assigned to

DEFINE

to define new intervention targets with a specific focus on sleep and stress:

- Complete an online daily sleep diary for 14 days
- Complete two sets of online surveys

- 4 Complete follow-up study activities

DEFINE

Repeat the same study activities after 9 months

ENGAGE

to engage youth in biosensor technology for self-monitoring of alcohol:

- Wear a wrist alcohol biosensor (BACtrack Skyn) for 30 days and report your alcohol use daily using a smartphone app.
- Provide 1 dried blood spot sample to measure alcohol use after 30 days

ENGAGE

Complete an online survey after 1 month

SUSTAIN

Define and Engage will inform the Sustain study, which will launch in 2024. Participants will:

- Complete online surveys at all time-points
- Complete health and telehealth brief interventions

SUSTAIN

Complete three online surveys after 3, 6, and 12 months

ELIGIBILITY

- ✓ 18-29 years old
- ✓ HIV positive
- ✓ Currently residing in Florida
- ✓ Have had at least 1 alcoholic beverage within the past 30 days
- ✓ Are able to read and understand English
- ✓ Have internet access
- ✓ Are not pregnant and are not trying to become pregnant

Participants are free to stop participating at any time.

WHAT ARE OUR RESEARCH GOALS?

The overall goal of this program is to utilize advances in translational behavioral science and technology to define new developmental and culturally appropriate intervention targets and to optimize existing self-management interventions in emerging adults with HIV. The goal of the **Community Engagement Core** is to support community-engaged recruitment, retention and dissemination across all three projects. The goal of the **Data Science Core** is to utilize FDOH state-wide public surveillance and other state-wide data resources to develop and apply new analytic methods.
