UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

2017-2018 Academic Year

Rotation/Block	Rotation Month	Rotation Dates
1	June	June 5, 2017- June 30, 2017
2	July	July 3, 2017 – July 28, 2017
3	August	July 31, 2017 – August 25, 2017
4	September	August 28, 2017 – September 22, 2017
5	October	September 25, 2017 – October 20, 2017
6	November	October 23, 2017 – November 17, 2017
7	December	November 20, 2017 – December 15, 2017
Holiday Break December 16, 2017 – January 7, 2018		
8	January	January 8, 2018 – February 2, 2018
9	February	February 5, 2018 – March 2, 2018
10	March	March 5, 2018 – March 30, 2018
11	April	April 2, 2018 – April 27, 2018
Capstone (requirement for M4) April 30- May 4, 2018		

M4 includes one (1) required 4 week Acting Internship, one (1) required 4 week Emergency Medicine rotation, six (6) required 4 week electives, and three (3) four week rotations to be used for additional electives, research, independent study, residency interviews, make-up or vacation.

Graduation May 18, 2018

Note: Dates subject to change. Students will be notified.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Fourth Year Requirements - 2017-2018

The fourth year is divided into eleven, four week blocks. All students are required to complete and pass the following eight blocks:

- One Acting Internship in any core area - Family Medicine, Internal Medicine, Emergency Medicine, Neurology, Obstetrics and Gynecology, Pediatrics, Psychiatry, Critical Care, or Surgery (must be taken at affiliated hospitals)
- One 4 week Emergency Medicine rotation.
- Electives (all six electives must be completed; up to four electives may be taken at approved extramural institutions; up to four electives may be used to do independent study; up to two electives may be used to do a research study; and **no more than four electives may be taken in the same core area**)
- Students may take a maximum of 12 weeks of non-clinical care rotations. Courses that are considered to be non-clinical are: **MDE 8040 Medical Spanish, MDE 8900 MedU, MDE 8051 History of Western Medicine, MDE 8048 Narrative Medicine, MDE 8900 Culinary Medicine, MDE 8227 Advanced ECG, MDE 8520 Advanced Clinical Anatomy, MDE 8093 Clinical Anatomy Teaching, MDE 8534 Surgical Pathology, MDE 8535 Autopsy Pathology, MDE 8530 Pathology and Laboratory Medicine, and any Research that does not include clinical duties or patient interaction.**
- Students must complete at least 4 weeks of clinical rotations in blocks 8-11

The three remaining blocks of the fourth year may be used for other electives, independent study, further research, residency interviews, or remediation (if needed). Students finish the fourth year with a Capstone Experience that provides specialty-specific preparation for internship, leadership training and teaching experience.

- **One acting internship**
- *Note: Students cannot repeat the same acting internship at another location. Acting internships can be taken in both an inpatient and outpatient setting.*

Family Medicine	MDI 8120 1 (FH)	Neurology	MDI 8650 1 (FH) MDI 8470 2 (OH) MDI 8470 7 (NCH) MDI 8802 9 (PO)

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Things Every Medical Student Should Know About Electives

- Students should use the elective program to increase their knowledge in fields which they have particular interest, to correct deficiencies in fields of importance to their overall medical education, and to explore areas of medicine outside the area of special interest to the student. **ELECTIVE TIME IS NOT FREE TIME.** It is to be used productively in amplification of the undergraduate medical education.
- Electives are taken for credit and students must perform satisfactorily in their required and elective work in order to be promoted and recommended to graduate. A program of electives should be selected by consultation with a faculty advisor and must be approved by the Associate Dean for Students.
- Students should discuss their proposed coursework with the faculty member who will supervise and evaluate their performance.
- Students may not be paid for work performed as part of their elective or required coursework for credit. Students may not be supervised by a parent or relative.

Important: Most 4th Year Clerkships, Acting Internships, and Electives are available in all blocks. Exceptions are noted with individual course listing. Enrollment limitations are noted in course information.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Attendance Policy

Excused Absences

Students are expected to attend all scheduled hours of clinical responsibilities and didactic instruction. Mandatory clerkship participation requirements and remediation due to absence are determined by the Clerkship Director. The student will be held responsible for any material covered during the excused absence, but will be permitted a reasonable amount of time to complete any missed work. Recognizing that situations may arise which require students to miss time from their clerkship responsibilities, the procedures presented below will be followed when absence is necessary:

- Students on both required and elective rotations in the fourth year will be allowed to miss no more than three full days of responsibilities per rotation as excused absences for the following:
 - a. Personal illness
 - b. Family emergency
 - c. Presentation at professional meetings
 - d. Residency interviews

- Absences due to illness or family emergencies should be reported to the clerkship director or site director, clerkship coordinator and supervising physician/chief resident on service on the first day of any absence.

- Approval for anticipated leave, including residency interviews and student presentations at professional meetings:
 - Requests must be submitted in writing prior to the start of the affected rotation, and at least six weeks in advance of the scheduled event. Requests must be approved by the Clerkship or Elective Director.
 - Once approved, the student must inform their supervising physician/chief resident and their team of the anticipated absence.
 - Approved student absence form will be completed and forwarded to the Office of Student Affairs by the clerkship coordinator.

- Excused absences exceeding three days will require make-up, the nature of which will be determined by the Clerkship or Elective Director. Examples include the taking of additional call or weekend shift. Make-up time will be scheduled **at the convenience of the site.**

- Excused absences do not include:
 - Vacations, personal days or social events, including weddings, graduations or birthdays
 - Routine doctor/dental appointments
 - Taking Step 2 exam
 - Missing Orientation or Capstone or LCT Session

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Unexcused Absences

- In the event of an absence from the clerkship without permission from the clerkship director, the student will lose 5 points per unexcused absence from their final clerkship grade.
- Additional remediation may be required at the clerkship director's discretion (e.g., the taking of extra call).

Important: Blocks 6, 7, and 8 (10/23 – 2/2) is a busy time for Residency interviews and may result in you exceeding the number of excused absences allowed in a block. You should take this into consideration when planning your 4th year schedule and consider taking these blocks off or scheduling a rotation that can work around the amount of time needed to attend interviews.

The attendance policy can be found here: <https://med.ucf.edu/administrative-offices/student-affairs/registrar/registrar-resources/>

UNIVERSITY OF CENTRAL FLORIDA COLLEGE OF MEDICINE FOURTH YEAR (M4)

Scheduling Away Electives and Independent Studies

Away Electives

- All students are encouraged to participate in at least one away rotation.
- Students may not participate in more than **four** away electives.
- All petitions for away rotations must include a description of the course, including schedule, duties, learning outcomes, etc.
- It is the student's responsibility to provide their supervising faculty with an evaluation for each away rotation and to have the supervising faculty complete it and turn in to the Registrar's Office in a timely manner. Students will not receive a grade for an away rotation in which no evaluation is completed.

VSAS Institution

VSAS® is an AAMC application designed to streamline the application process for senior "away" electives at U.S. LCME medical schools and independent academic medical centers that are members of the Council of Teaching Hospitals and Health Systems (COTH). The service requires only one application for all participating institutions, effectively reducing paperwork, miscommunication, and time. VSAS also provides a centralized location for managing offers and tracking decisions.

How to Apply to VSAS

Once you have determined that you will be using VSAS, the following steps outline the application process. Note that hosts typically begin accepting applications in March for the upcoming academic year.

Step 1. Receive VSAS Authorizations

You will be emailed VSAS login instructions once the UCF COM Registrar has issued authorizations. Each student will be issued 25 authorizations.

- Each elective request requires an authorization, even if you have multiple requests at the same institution or for the same elective but during a different block (i.e., a request for Cardiology at Vanderbilt during block 3 and a request for Cardiology at Vanderbilt for block 5 requires two separate authorizations).
- When they are issued, you will receive a "VSAS: New User Instructions" e-mail containing the information you need to sign in to VSAS.

Step 2. Complete Application Profile

Provide contact information and the dates on which you have *or will* have finished your core clerkships.

Step 3. Review Host Institution Information

Review the VSAS *Institutions* tab for host-specific requirements and dates on which applications will be accepted.

UNIVERSITY OF CENTRAL FLORIDA

COLLEGE OF MEDICINE

FOURTH YEAR (M4)

Step 4. Upload and Assign Documents

Upload and assign required documents to a specific host institution or elective request.

- Photo, CV, and immunization records are often required
- Additional documentation is required by some hosts
- Transcripts may only be uploaded by the COM

Step 5. Search for Electives

Browse electives by keyword, specialty, institution name, state, and/or elective start month. Save electives to apply for later.

Step 6. Apply to Electives

Select saved electives (with preferred dates) for which you are applying and -

- arrange elective requests in order of preference
- review, edit, and upload required documentation
- pay VSAS fees and submit your application
- The COM will then add additional data about you before 'releasing' your applications to host institutions.

Step 7. Track Offers

Review application statuses and host decisions through the *VSAS Tracking* tab.

- Accept or decline offers before offers expire
- Withdraw pending applications, or drop accepted offers, if necessary

VSAS Tip. Read E-Mails

Make sure the e-mail address on your *Application* tab is current, as you will receive e-mails notifying you of:

- offers for electives and offers soon to expire
- electives applied for but which are not available
- scheduling conflicts between scheduled electives

Once approved by the host institution, students will need to complete the Petition for Special Clinical Study Credit for Extramural Clerkship form and have approved in order to receive credit for the elective.

Non-VSAS Institution

Students may also apply for away electives at non-VSAS institutions. It is entirely the student's responsibility to locate and apply for these electives. Once approved by the host institution, students will need to complete the Petition for Special Clinical Study Credit for Extramural Clerkship form and have approved in order to receive credit for the elective.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Independent/Research Studies

- The opportunities for use of elective time in the fourth year include research in clinical or basic science areas of UCF College of Medicine or other institutions. The flexibility of fourth year curriculum gives students maximum opportunity for individual development.
 1. A student may do no more than **8 weeks** of research.
 2. A student may do no more than **16 weeks** of independent study.
 3. Students may be registered for the same independent or research study for no more than two rotations, but the objectives for each rotation must be different.

- Independent/Research Studies must be supervised by a UCF faculty member. Students should work with the Faculty Supervisor to determine the topic of study and the deliverable.

- Students must complete a Petition for Independent/Research Study prior to the start of the rotation. The petition must include a description of the study or research being conducted, and must be signed by the faculty supervisor, the Assistant Dean for Medical Education, and the Associate or Assistant Dean for Students. Failure to turn in the Petition for Independent/Research Study by the deadline may result in No Credit.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Making Changes to Your Schedule

- Enrollment in a required course or elective is considered a commitment. Changes must be requested **at least 6 weeks** in advance prior to the beginning of the elective. After 6 weeks, all requests to add/drop/withdraw from an elective will require the approval of the Associate Dean for Students.
- Fourth year students' course changes must be made far enough in advance to:
 1. Notify Instructor of Record;
 2. Obtain confirmation of availability from the site;
 3. Allow call schedules to be modified; and
 4. Complete any training and/or screenings required by the site

****Changes must be made at least 6 weeks in advance prior to the beginning of the elective. No change may be made within 6 weeks of the beginning of the elective or after the elective has begun, except under extenuating circumstances and only with the approval of the Associate Dean for Students.**

****Under NO circumstances will changes be approved for requests made less than 60 days before the start of a rotation for any courses offered at the Veteran's Hospital.**

- All requests for schedule changes should be emailed to Christie Hasegawa in the M.D. Registrar's Office at christie.hasegawa@ucf.edu. Students should never make schedule requests directly with the preceptor.
- When availability of a course is confirmed by Christie Hasegawa and a request for a change has been approved, students must complete a Clerkship/Elective Change Request form and have it signed by their Academy Leader. The completed form must be turned in to the M.D. Registrar's Office prior to the start of the rotation.
- No updates or changes to a student's registration will be made in OASIS until a completed Clerkship/Elective Change Request form has been received by the Registrar's Office. Failure to turn in a Clerkship/Elective Change Request form on time may result in No Credit. Students may not report to a site until their registration has been updated, as you must be registered in order for liability coverage to be in effect.

Course Key

Structure of Special Studies Clinical/Research @ UCF COM

Special Studies/Research/Independent Study

MDE 8900/MDR 8900

- The Independent Study/Research elective permits 4th year medical students to pursue, under the sponsorship of UCF College of Medicine faculty members, areas of study/research that are not included among regular elective offerings. Arrangements for these electives are made between the student and the faculty member; they will require administrative approval prior to registration.

Structure of Visiting Elective/Externship Outside of UCF COM

Extramural Clerkship

MDX 8011

- This elective offers students the opportunity to gain extramural experience in approved programs to gain further training and experience in “off-campus” settings—hospital, medical schools or other practice areas.

Structure of Special Studies Clinical/Research for Away Clerkship

Special Studies/Research/Independent Study

MDX 8900

- The Independent Study/Research elective permits 4th year medical students to pursue areas of study/research outside of UCF. Arrangements for these electives are made between the student and the away location supervising faculty member. Students must obtain administrative approval prior to registration.

Structure of Special Clinical Study Credit for International Clerkship

Special Studies/Research/Independent Study

MDE 8072

- Students interested in completing an elective outside of the United States should contact the Office of Student Affairs. Additional information may be available from the Director of International Health Programs.

Maximum Enrollment: 1-2 per block

This four week core clerkship introduces the student to initial evaluation, workup, diagnostic ordering and treatment of patients presented to the emergency department

Objectives:

1. Students are expected to develop basic diagnostic skills in emergency medicine. These basic skills include performing a detailed history and physical exam, the collection of appropriate cost-effective laboratory data and radiographs, the performance of appropriate procedures, and the formulation of relevant differential diagnosis and treatment plans.
2. Students will develop basic skills and understanding of wound repair, abscess drainage, and ultrasound usage as well as developing skills in central line insertion, lumbar puncture, joint aspiration, slit lamp exam, dental blocks, and airway interventions through either direct supervision by residents, fellow, or attendings or by assisting residents, fellows, and attendings in these procedures.
3. During the 4 week rotation, the students will achieve competence in six areas listed below (based on ACGME core competencies:

The critical care clerkship immerses the student in the care of ICU patients by focusing technology, multidisciplinary personnel, and physiologic, goal-oriented, humanistic practice in critical illness. The University of Central Florida College of Medicine M4 Critical Care Clerkship is designed to make the transition from basic clinical sciences to acute care of patients with life-threatening conditions and who need advanced life support technology and personnel. The clerkship is based in the hospital intensive care unit and the educational experience will come from a multidisciplinary team of hospital-based intensivists, critical care fellows and residents, consulting physician specialists, critical care nurses, pharmacists, respiratory therapists, dietitians, physical therapists, rehabilitation specialists, social workers, other health care professionals, and most importantly, the patients and their families who are cared for by this team. The practice of critical care medicine is based upon sound physiological principles, evidence-based practices, and application of cutting-edge technology, meticulous attention to details, and a compassionate, humanistic approach to severely ill or injured patients and support of their families at their time of crisis.

Objectives:

The educational philosophy of the critical care clerkship is to provide the matrix upon which to develop a scientifically sound approach to the management of critically ill patients. Additionally, the program is designed to allow individuals to become familiar with the clinical aspects of critical care and acute care medicine.

1. Show an understanding of a comprehensive approach to patients with multi-system critical illness.
2. List the indications and complications of invasive hemodynamic monitoring.
3. Demonstrate understanding of the techniques for arterial, central venous, and pulmonary arterial catheterization.
4. List and prioritize means for increasing cardiac output.
5. Define, in physiologic terms, the adequacy of cardiac output.
6. Reproduce and utilize the formulae for SVRI, PVRI, LVSWI, RVSWI, CI, SV, CPP and MAP.
7. List major risk factors for acute respiratory failure.
8. Discriminate between oxygenation, ventilation, and airway support.

The critical care clerkship immerses the student in the care of ICU patients by focusing technology, multidisciplinary personnel, and physiologic, goal-oriented, humanistic practice in critical illness. The University of Central Florida College of Medicine M4 Critical Care Clerkship is designed to make the transition from basic clinical sciences to acute care of patients with life-threatening conditions and who need advanced life support technology and personnel. The clerkship is based in the hospital intensive care unit and the educational experience will come from a multidisciplinary team of hospital-based intensivists, critical care fellows and residents, consulting physician specialists, critical care nurses, pharmacists, respiratory therapists, dieticians, physical therapists, rehabilitation specialists, social workers, other health care professionals, and most importantly, the patients and their families who are cared for by this team. The practice of critical care medicine is based upon sound physiological principles, evidence-based practices, and application of cutting-edge technology, meticulous attention to details, and a compassionate, humanistic approach to severely ill or injured patients and support of their families at their time of crisis.

Objectives:

The educational philosophy of the critical care clerkship is to provide the matrix upon which to develop a scientifically sound approach to the management of critically ill patients. Additionally, the program is designed to allow individuals to become familiar with the clinical aspects of critical care and acute care medicine.

1. Show an understanding of a comprehensive approach to patients with multi-system critical illness.
2. List the indications and complications of invasive hemodynamic monitoring.
3. Demonstrate understanding of the techniques for arterial, central venous, and pulmonary arterial catheterization.
4. List and prioritize means for increasing cardiac output.
5. Define, in physiologic terms, the adequacy of cardiac output.
6. Reproduce and utilize the formulae for SVRI, PVRI, LVSWI, RVSWI, CI, SV, CPP and MAP.
7. List major risk factors for acute respiratory failure.
8. Discriminate between oxygenation, ventilation, and airway support.

FOURTH YEAR (M4)

Acting Internship

Acting Internship in Pediatric Critical Care

MDI 8463 1

Full-time (4 weeks)

(FH) Florida Hospital

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Aaron Godshall

Contact person: Karen Koster, (407) 303-2888;

karen.koster@flhosp.org

Maximum Enrollment: 1 each block

First Day: Report to Florida Hospital for Children South
Tower, 5th floor PICU @ 8:00 am

MDI 8463 2

Must be scheduled through VSAS

Full-time (4 weeks)

(OH)

Grading Basis: ABCF

First Day: Report to OH GME, 86 W. Underwood St., 1st floor lobby, Orlando, FL @ 10:00 am where you will meet with Sandra Ingram and Alexander Arismendi. You should expect to receive a reminder email from Mr. Arismendi before the start of the rotation

Primary Faculty Supervisor:

Dr. David Skey

Contact Person: Sandra Ingram,

GME Coordinator, Sandra.Ingram@Orlandohealth.com

Maximum Enrollment: Varies by block

MDI 8463 7

Full-time (4 weeks)

(NCH) Nemours Children's Hospital

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Heather Fagan,

heather.fagan@nemours.org

Contact Person: Tiffany Baulkman, tiffany.baulkman@nemours.org;

Dr. Heather Fagan, heather.fagan@nemours.org

Maximum Enrollment: 1 per block

First Day: Report to Nemours Children's Hospital
lobby @ 8:30 am for a tour and brief orientation.

Program Overview:

Students will rotate in the state of the art Pediatric Intensive Care Unit (PICU) and Pediatric Special Care Units at Florida Hospital South. Students will work under the supervision of the pediatric critical care attending and the PICU team to care for children in critical or serious condition.

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Acting Internship

Acting Internship in Pediatric Critical Care continued

Objectives:

- Understand the scope of established and evolving biomedical, clinical, epidemiological and social-behavioral knowledge needed by a physician caring for critically ill children; demonstrate the ability to acquire, critically interpret and apply this knowledge in pediatric critical care.
- Succinctly present an ICU patient on rounds, formulate a coherent assessment of a patient's problems and present an appropriate therapeutic/diagnostic plan. Further, effectively communicate this plan to nurses, respiratory therapists, and sub-specialists/ consultants.
- Recognize and appropriately respond to acute life threatening events. The student should observe and be able to describe the necessary skills to resuscitate and describe the initial stabilization of the critically ill child particularly airway management, volume replacement and resuscitative pharmacology.
- Demonstrate competence in basic airway skills (appropriate implementation of oxygen delivery devices and demonstration of bag-mask ventilation) and placement of peripheral intravenous catheters. Advanced airway skills (intubation) and advanced intravenous access skills (central venous catheter placement and arterial line placement) may be observed.
- Understand the pathophysiology and treatment of common medical disorders in the PICU: respiratory failure (apnea, bronchiolitis, asthma, ARDS), shock (septic, cardiogenic, hypovolemic), neurologic critical care (status epilepticus, traumatic brain injury, brain death), renal failure, as listed on the Pediatric Critical Care Required Encounters list
- Understand the different monitoring techniques in pediatric critical care: vascular hemodynamics, intracranial devices, blood pressure, arterial saturations, end-tidal CO₂, and a variety of common laboratory tests.
- Utilize common diagnostic tests and imaging studies appropriately in the pediatric intensive care unit, obtaining consultation as indicated for interpretation of results.
- Understand pediatric critical care pharmacology: inotropes and vasoactive agents, basic antibiotic therapy, common sedatives and analgesics, drug pharmacokinetics and monitoring of side effects.
- Understand techniques for enteral and parenteral nutritional supplementation in the PICU patient.
- Understand the ethical and legal issues which emerge during the care of critically ill and/or dying children (do not resuscitate orders, withholding and withdrawing life support, right of patients).
- Understand the importance of psychosocial issues related to the care of critically ill or dying children. Learn to provide support and deliver difficult information to the family of a critically ill child. Recognize the health care challenges of a child with a critical or chronic disease. Appraise the impact of a child's critical illness on his or her family.
- Apply evidence based principles of pediatric critical care to compare and contrast available treatment options with regard to efficacy, risk, benefit, cost-effectiveness.

COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Acting Internship

Acting Internship in Family Medicine

Clerkship Directors: Sergio Salazar, M.D.

MDI 8120 1

Full-time (4 weeks)

(FH) @ Winter Park Memorial Hospital

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Carlos Dumois

Contact person: Katy Capote, (407) 646-7469;

katerina.capote@flhosp.org

Maximum Enrollment: 1 each block (None in July)

*This rotation is only available to students planning to specialize in Family Medicine

First Day: Report to 133 Benmore Drive, Suite 201, Winter Park, FL 32792 @ 8:15 a.m where Jacque Malcolm will meet you and give you your welcome packet.

This four week experience will provide advanced clinical training in the care of patients of all ages in the hospital and clinic settings.

Objectives:

1. Demonstrate ability to assess and care for ill hospitalized adult patients, initially and in an ongoing fashion.
2. Demonstrate appropriate communication skills, with colleagues (oral and written presentations), patients and families.
3. Demonstrate professional behavior at all times.

Acting Internship in Internal Medicine

Clerkship Directors: Sergio Salazar, M.D.

MDI 8201 8

Full-time (4 weeks)

(HF) Melbourne Internal Medicine Associates

***This site is more than 50 miles from the COM**

Grading Basis: ABCF

Primary Faculty Supervisor: TBD

Contact person: Sandy Miller, (321) 725-4500 x7195;

Sandy.Miller@mima.com

Maximum Enrollment: 1 each block

**First Day: Report to 1223 Gateway Drive, Melbourne,
FL 32901, 2nd floor Administration @ 9:00 a.m.**

Goals are advanced training and responsibility in the care of adult medical patients in the inpatient (hospital and long term care facilities) and outpatient settings. The student will assume intern level responsibility for his/her patients and will care for 3-5 patients at one time while as an inpatient or evaluate approximately four patients per ½ day session in the outpatient clinic setting(s).

Objectives:

1. Demonstrate ability to assess and care for ill hospitalized adult patients, initially and in an ongoing fashion.
2. Demonstrate appropriate communication skills with colleagues (oral and written presentations), patients and families.
3. Demonstrate professional behavior at all times.

Acting Internship

Acting Internship in Obstetrics and Gynecology

Clerkship Director: Aileen Caceres, M.D.

MDI 8160 2

Full-time (4 weeks)

(OH) Winnie Palmer Hospital for Women & Babies

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Lori Spreitzer

Contact person: Sandra Ingram, GME Coordinator
(321) 841-3715; sandra.ingram@orlandohealth.com

Maximum Enrollment: 1 each block (except June & July)

First Day: Report to OH GME, 86 W. Underwood St., 1st floor lobby, Orlando, FL @ 10:00 am where you will meet with Sandra Ingram and Alexander Arismendi. You should expect to receive a reminder email from Mr. Arismendi before the start of the rotation

The student will spend two weeks functioning as a Sub-Intern and team member in the care of obstetrical patients and two weeks as a Sub-Intern and team member in the care of gynecological patients at Winnie Palmer Hospital. This course will broaden the student's clinical experience in obstetrics and gynecology, including exposure to both inpatient and ambulatory settings.

Objectives:

General Objectives

1. As an integral member in the patient-care team, the student will actively participate in gynecologic surgical procedures and Labor and Delivery activities.
2. This AI will enhance the student's patient care skills, including the ability to perform proper and complete histories and physical exams, formulate differential diagnoses, and make clinical decisions for both obstetrical and gynecological patients.
3. The student will have exposure, training, and experience in managing pregnant patients in the antepartum, intrapartum, and postpartum periods.
4. The student will understand basic principles and clinical applications of obstetrical ultrasound.
5. The student will augment her/his surgical skills.
6. Students are expected to take overnight and/or weekend call during the rotation. Numerous didactic conferences are held during the rotation.

Obstetrics Objectives

1. History skills: Gather the important information that is needed for the pregnancy history and complete a history in the medical record for at least 5 patients.
2. Physical examination skills: Complete a pertinent physical examination for the evaluation of pregnant patients. The student should demonstrate the ability to perform this pertinent physical examination while being observed by at least one attending or resident.
3. Knowledge/diagnostic and treatment skills: Know about common medical and surgical conditions affecting the fetus and mother.
4. Procedural skills: Observe and assist in common procedures including vaginal delivery, operative vaginal deliver (including caesarian sections), ultrasound, amniocentesis.
5. Attitude: Demonstrate professional responsibility in working as a team member with other members of the Ob/Gyn care team, patients, and families.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Acting Internship in Obstetrics and Gynecology –Continued

Clerkship Director: Aileen Caceres, M.D.

Gynecological Objectives

1. To gain experience in the diagnostic and therapeutic approaches for various gynecologic conditions.
2. To expand basic knowledge with reading materials and case discussions as well as direct patient care.
3. To enhance interpersonal skills and professional conduct in female patient encounters.
4. To hone procedural skills.
5. To develop triage skills, indications for inpatient versus outpatient management and referral for specialty or subspecialty consultation.
6. To receive mentorship and/or research opportunities in the specialty.

Full-time (4 weeks)

(OH) Winnie Palmer Hospital for Women & Babies

Grading Basis: ABCF

Primary Faculty Supervisors: Dr. Veronica Schimp & Dr. Alan Gordon

Contact person: Sandra Ingram, GME Coordinator,

Sandra.ingram@orlandohealth.com

Maximum Enrollment: 1 each block (except July)

First Day: Report to OH GME, 86 W. Underwood St., 1st floor lobby, Orlando, FL @ 10:00 am where you will meet with Sandra Ingram and Alexander Arismendi. You should expect to receive a reminder email from Mr. Arismendi before the start of the rotation

Experience on a gynecologic service, including operating room, inpatient and outpatient care; team management approach to gynecologic cancer patients, treatment and follow-up of invasive gynecologic malignancies, etiology and risk factors for gynecologic neoplasias, pre-and post-operative evaluation and treatment of gynecologic neoplasias. Research project encouraged. This course is designed to provide the student with in-depth exposure and experience in gynecologic oncology. The student will be an integral part of the team and as such will be involved in the assessment, management and follow-up of patients admitted to the GYN oncology service. The student will participate in daily work rounds with house staff and attending faculty, teaching rounds where patients are presented and treatment plans developed. In addition to participation in the surgical management of women with gynecologic malignancies, students will also be exposed to the outpatient setting, including colposcopy and outpatient management of oncology patients.

Objectives:

1. History skills. Gather the important information that is needed for Gyn/oncology history and complete a history in the medical record for at least five patients.
2. Physical examination skills. Complete a pertinent physical examination for the evaluation of gynecologic cancers on at least five patients. The student should demonstrate the ability to perform this pertinent physical examination while being observed by at least one attending or resident.
3. Knowledge/diagnostic and treatment skills: Know about common oncology conditions.
4. Procedural skills. Observe procedures, such as cervical colonization, colposcopy/LEEP, hysterectomy, hysteroscopy and laparoscopy.

First Day: Report to Nemours Children's Hospital

Full-time (4 weeks)

(NCH) Nemours Children's Hospital

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Caroline Chua,

caroline.chua@nemours.org

Contact Person: Tiffany Baulkman, tiffany.Baulkman@nemours.org;

Maximum Enrollment: 1 per block

This elective is designed to expose the student to normal physiology and a wide variety of diseases that affect the term and pre-term infant. Patient care activities will take place in the Neonatal Intensive Care unit, where the student will learn to become an integral part of the healthcare team. Skills learned during the rotation will include evaluation, diagnosis and treatment of the critically-ill newborn, proper use of ventilator management, and understanding the factors that contribute to a "high-risk" pregnancy. The student will also learn counseling skills and discussion of ethical issues that arise in the care of the critically-ill newborn.

Objectives:

1. Demonstrate proficiency in healthcare principles for the care of the critically-ill newborn (e.g., evaluation, diagnosis, and treatment).
2. Explain or demonstrate the proper use of ventilator management.
3. List the factors that contribute to a "high-risk" pregnancy.
4. Demonstrate proficiency in assisting in the performance of specialized procedures.
5. Demonstrate counseling skills in care conferences with parents regarding their critically-ill newborn.
6. Discuss ethical issues that arise in the care of the critically-ill newborn.
7. Demonstrate team skills in the neonatal intensive care unit.

7402; joann.steinebach@va.gov

Maximum Enrollment: 1 each block

**First Day: Report to the Lake Nona VA Walk-In Clinic
on the 2ND floor in the Mental Health Clinic @ 8:00 am**

Increased level of responsibility for clinical assessment and treatment planning in Walk-In/Triage Clinic at V.A. Additional responsibilities for teaching 3rd year medical students.

Objectives:

1. Perform and document a complete psychiatric diagnostic evaluation in a patient population with a high level of acuity of treatment needs, identifying psychopathology, and developing appropriate biopsychosocial evaluation (laboratory, radiologic, and psychological testing) and treatment plans.
2. Appropriately utilize the indications for psychiatric hospitalization, considering presenting problem and its acuity, risk of danger to patient or others, community resources, and family support; when necessary, help implement the process of involuntary hospitalization.
3. Demonstrate the ability to appraise and assimilate scientific evidence, utilizing relevant databases of psychiatric evidence-based medicine, to improve patient care and teach 3rd year medical students rotating in Psychiatry.
4. Demonstrate interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families, and other health professionals and students.

found on the M4 GPS site. Students should email

Medical Education Coordinators to get computer access

codes.

Goal is to assume increased responsibility for Psychiatry intake assessments and treatment planning and delivery for patients in residential care at the V.A. Domiciliary. This patient population has high rates of homelessness, PTSD, and substance-related disorders, and the student will gain valuable clinical experience in these and other psychiatric conditions. No on-call. No weekend duties.

Objectives:

1. Perform and document complete psychiatric diagnostic evaluations in a residential care patient population with high levels of homelessness, PTSD, and substance-related disorders, and developing appropriate biopsychosocial evaluation and treatment plans.
2. Demonstrate interpersonal and communication skills that result in the effective exchange of information and collaboration with patients, their families, and other health professionals.
3. Know the clinical features of, and help implement treatment for, intoxication with, and withdrawal from alcohol and drugs.
4. Demonstrate the ability to monitor and document patients' clinical progress, and alter diagnostic formulation and management in response to changes.

Acting Internship

Acting Internship in Consultation Liaison Psychiatry

Clerkship Director: Martin Klapheke, M.D.

MDI 8841 3

Full-time (4 weeks)

(VA) VA Lake Nona

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Patrick Dean

Contact person: Joann Steinebach (407) 599-1599 x

7402; joann.steinebach@va.gov

Maximum Enrollment: 2 each block

First Day: Report to Lake Nona Consult/Liaison Office @

8:00am. Meet with Dr. Patrick Dean for orientation.

Please review the First Day Reporting Instructions document found on the M4 GPS site. Students should email Medical Education Coordinators to get computer access codes.

Students will gain progressive clinical responsibilities for the psychiatric assessment and management of patients hospitalized on medical and surgical wards that have concomitant psychiatric conditions. Students will be expected to gain the knowledge and develop the clinical skills necessary to provide effective consultation for medical surgical patients and their treatment teams. It is anticipated that clinical conditions that students will encounter will include:

- Delirium with multifactorial etiologies including psychiatric reactions to medications
- Mood disorders including major depressive disorder and bipolar disorder
- Posttraumatic stress disorder
- Anxiety disorders including generalized anxiety disorder and panic disorder
- Substance use disorders
- Psychotic disorders including schizophrenia
- Patients with potential dangerousness to self or others
- Patients with possible lack of decision making capacity
- Personality disorders
- Neurocognitive disorders including Dementia

Objectives:

1. Perform and document a psychiatric diagnostic evaluation in a patient population with comorbid acute medical and surgical conditions, and develop recommendations for appropriate biopsychosocial evaluation (including laboratory, radiologic and psychological testing) and treatment plans.
2. Recognize the indications (when medically stable) for transfer for psychiatric hospitalization, considering the presenting problem and its acuity, and any risk of danger to the patient or others; when necessary, help implement the process of involuntary hospitalization.
3. Conduct literature reviews of current evidenced-based treatments for a range of psychiatric conditions seen in the acutely ill medical and surgical patient population.

FOURTH YEAR (M4)

Acting Internship

Acting Internship in Emergency Psychiatry

Clerkship Director: Martin Klapheke, M.D.

MDI 8842 3

Full-time (4 weeks)

(VA) Lake Nona VA

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Henry Boilini

Contact person: Joann Steinebach (407) 599-1599 x

7402; joann.steinebach@va.gov

Maximum Enrollment: 1 each block

First Day: Report to the Lake Nona VA Emergency Department @ 8:00 am and meet with Dr. Patrick Dean for orientation. Students should email Medical Education Coordinators to get computer access codes.

M4 Acting Interns will gain progressive clinical responsibilities for the psychiatric assessment and management of patients presenting to the Emergency Department for urgent care. Students will be expected to gain the knowledge and develop the clinical skills (diagnostic interviewing and development of therapeutic alliance in the acute settings; crisis intervention and management) necessary for patients presenting with acute psychiatric conditions, including:

1. Potential dangerousness to self or others
2. Acute, severe, major depressive disorder
3. Acute psychosis, including Bipolar disorders and Schizophrenia
4. Acute substance abuse intoxication/withdrawal
5. Acute anxiety/agitation, including PTSD
6. Complications of Neurocognitive disorders such as dementia

Learning Activities

1. Independent diagnostic interviews of patients.
2. Formal case presentations of individual patients to the attending faculty supervisor, including discussion of differential diagnoses and proposals of appropriate workup and biopsychosocial treatment plans.
3. Assist with implementation of management plan, including helping arrange outpatient follow-up or hospital admission when indicated.
4. Conduct literature reviews of current evidenced-based treatments for a range of acute psychiatric conditions.

Contact person: Maria Cepero, Residency Coordinator, (407) 303-7203; Maria.cepero@flhosp.org

Maximum Enrollment: 2-3 each block

The University Of Central Florida College Of Medicine M4 Acting Internship in General Surgery will build upon the M3 experience in General Surgery and further explore the workup, diagnosis, treatment and follow up of a wide variety of surgical diseases. Evidence based practices will be emphasized. The student will spend 4 weeks on the General Surgical Service at either Orlando Regional Medical Center or Florida Hospital. Students will be responsible for the evaluation and workup of patients in the emergency room and wards as well as in the outpatient setting. Participation in daily inpatient multidisciplinary ward rounds will be emphasized as well as active participation in a wide array of bedside surgical procedures and major operative interventions under general anesthesia. In house call will be a requirement and will be no more than twice per week and may include weekend call and weekend ward rounds. The student will also be responsible for regular attendance at weekly didactic conferences, grand rounds, journal club conferences and morbidity and mortality conferences and simulator/animal lab experiences when offered.

Objectives:

Medical Knowledge

1. Be able to discuss the basic evaluation and treatment of benign and malignant breast disease, cutaneous malignancies, abdominal wall hernias, gallbladder disease and other acute inflammatory intra-abdominal conditions.
2. Understand the principles and rationale for management of surgical patients to include the preoperative assessment and management as well as postoperative care. Examples include assessment of patient risk, appropriate selection of patients for surgery, knowledge of anesthetic options, and principles of postoperative pain management and wound care.
3. Understand the general principles of laparoscopy. Examples include the physiologic consequences of pneumoperitoneum.
4. Understand the pathology as it relates to surgery.
5. Be knowledgeable of the anatomy of the abdomen, chest, neck and vascular tree.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Acting Internship in General Surgery –Continued

Clerkship Director: Matthew Lube, M.D.

6. Be knowledgeable with regard to the physiological basis of the disease process, fluid and electrolytes, nutrition, wound healing and organ function.

Patient Care

1. Accurately perform a complete history and physical examination in patients with common surgical problems and present patients to the attending and/or senior resident.
2. Participate in daily rounds and management of inpatients.
3. Demonstrate an understanding of the principles of surgical decision-making.
4. Efficiently utilize and interpret diagnostic laboratory testing. Examples of appropriate tests include serum chemistries, hematological profiles, and coagulation tests.
5. Efficiently utilize and interpret diagnostic radiological tests. Examples of the types of studies include mammography, gallbladder ultrasonography (US), plain film radiology tests and computed tomography (CT).
6. Under appropriate supervision, assist in basic surgical procedures such as: open lymph node biopsy (cervical, axillary, groin), hernia repair (inguinal, femoral, umbilical) excision of small subcutaneous masses, and laparoscopic cholecystectomy and appendectomy.
7. Under appropriate supervision, perform basic surgical procedures such as: Tracheal intubation, placement of venous access devices, removal of cutaneous lesions, routine wound closure.
8. Assist the resident physicians in the discharging of patients, including dictating the discharge summary, writing prescriptions, and ensuring appropriate follow-up.
9. Attend and participate in weekly outpatient clinics. Activities will include examination and evaluation of new patients and postoperative care of established patients.

Interpersonal and Communication Skills

1. Develop skill and sensitivity for appropriate counseling and educating patients and their families in a variety of clinical situations.
2. Work effectively with the health care team and/or other professional groups.
3. Effectively and promptly document practice activities.
4. Present all patients in a concise, organized, logical and knowledgeable manner.
5. Exhibit the ability to interact as part of the surgical team.
6. Exhibit honesty, reliability, good communication skills, and appropriate judgment.

Practice-Based Learning and Improvement

1. Use books, journal articles, internet access, and other tools available to learn about diseases and treatments.
2. Recognize the importance of lifelong learning in surgical practice by analyzing personal practice outcomes to improve patient care.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Acting Internship in General Surgery—Continued

Clerkship Director: Matthew Lube, M.D.

Systems-based Practice

1. Observe and learn the process of working with nursing, social work, home health, pharmacy, radiology, acquisition of test results, operating room (OR) scheduling, recovery room staff, and discharge planning.
2. Demonstrate an understanding and commitment to continuity of care by development of a patient care plan including timing of return to work and appropriate follow-up.
3. Understand the appropriate utilization of consultations from other surgical and medical specialties in a timely and cost efficient manner to facilitate and enhance patient care.

Professionalism

1. The student should demonstrate a high level of initiative and self-motivation during this rotation. They should be well read and prepared prior to any surgical procedure to include clinical knowledge of the patient. They should be dependable in completing assigned tasks. The student should demonstrate professional interpersonal skills when dealing with patients, staff, and other residents and attending physicians.
2. Understand the ethical principles pertaining to provision or withholding of clinical care, confidentiality of patient information, and informed consent.
3. Demonstrate sensitivity and responsiveness to patients' culture, age, gender, and disabilities.
4. Demonstrate accountability for actions and decisions.

Procedures

Medical students at the M4 level will take on the role as first assistant to senior resident physicians and attendings in the following:

1. Hernia repairs in the groin and umbilicus, demonstrating a basic understanding of the anatomy and surgical repair.
2. Further develop the skills in basic suturing, knot tying, retracting, and assisting during surgery that the student was exposed to during the M3 year.
3. Insertion of central lines, arterial lines, NG tubes, and Foley catheters.
4. Assist and sometimes perform less complicated surgical procedures such as: appendectomy, hemorrhoidectomy, and minor breast procedures.
5. Procedures for melanoma and other benign and malignant skin lesions.
6. Assist and sometimes perform common diagnostic biopsy procedures such as Fine-needle aspiration, Tru-Cut needle biopsy, & excisional biopsies of smaller tumors, e.g. melanoma, breast lesions and superficial lymph nodes.
7. Continue to develop an understanding of the function of surgical instruments (i.e. scalpel, forceps and scissors).
8. Continue to develop an understanding of the use of electro cautery.

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Acting Internship

Acting Internship in Pediatric Orthopedic Surgery

MDI 8570

Full-time (4 weeks)

(NCH) Nemours Children's Hospital

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. John Lovejoy III,

John.lovejoy@nemours.org

Contact Person: Tiffany Baulkman, (407) 567-3876;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 1 per block

**First Day: Report to Nemours Children's Hospital lobby @
8:30 am**

This rotation is intended for the student with interest in Orthopedic Surgery. The student will function at the level of a junior house officer and be expected to perform clinical activities with independence and procedures under direct supervision. The medical student will be expected to be involved in the workup, diagnosis, treatment, and follow up of patients with a wide variety of pediatric orthopedic surgical diseases. The student will be involved with the patient evaluation in the emergency department, outpatient clinic, and inpatient setting. He/She will also be involved in daily inpatient rounds, outpatient clinic, minor procedures, as well as major operations. The student will be expected to present in the pediatric orthopedic surgery education conference weekly, attend grand rounds, journal clubs, and morbidity and mortality conference. Call will be 1 day per week and 1 weekend day per rotation.

Learning Objectives

Patient Care:

1. Recognize common pediatric orthopedic surgical problems and emergencies in children.
2. Recognize orthopedic surgical complications in children.
3. Assist with the workup of new patients in the emergency department, outpatient clinic, and inpatient settings.
4. Assist in preparing patients for discharge.

Medical Knowledge:

1. Learn the fundamentals of basic science in pediatric orthopedic surgery.
2. Learn pediatric orthopedic common diagnoses and their management.
3. Read for the operative cases and be prepared for the operating room.
4. Understand the pathology of pediatric orthopedic disease.
5. Understand diagnostic tests commonly used in pediatric orthopedic patients.
6. Practice evidence-based medicine in reviewing the literature.

Practice-Based Learning and Improvement:

1. Utilize a pediatric orthopedic surgery textbook and journal articles to study pediatric orthopedic diseases.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Acting Internship in Pediatric Orthopedic Surgery continued

2. Document patient care activities in the medical chart in a timely fashion.
3. Utilize electronic educational resources.

Interprofessional and Communication Skills:

1. Learn to communicate well with families and children.
2. Learn to interact with surgical team.
3. Work well with other members of the health care team.

Professionalism:

1. Continue life-long learning.
2. Maintaining confidentiality of patient information.
3. Maintain sensitivity to others' cultures, age, gender, and disabilities.
4. Maintain accountability for personal actions and decisions.

Systems-Based Practice:

1. Learn to communicate appropriately with families under the direction of Faculty.
2. Learn to communicate with the health care team members about the surgical patients.

Learning Activities:

The medical student will present in the weekly pediatric orthopedic surgery education conference. He/She will present in daily inpatient rounds, attend pediatric surgery clinic, and participate in the surgeries. He/She will also practice evidence-based medicine by performing literature searches on the pediatric orthopedic surgery diseases of their patients.

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Acting Internship

Acting Internship in Colon and Rectal Surgery

Clerkship Director: Matthew Lube, M.D.

MDI 8676 2

Full-time (4 weeks)

(OH) Orlando Health

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Joseph Gallagher

Contact person: Sandra Ingram, GME Coordinator

(321) 841-3715; Sandra.ingram@orlandohealth.com;

Nancy Joiner, NJoiner@crcorlando.com

Maximum Enrollment: 1 each block

First Day: Report to OH GME, 86 W. Underwood St.,
1st floor lobby, Orlando, FL @ 10:00 am where you will
meet with Sandra Ingram and Alexander Arismendi.
You should expect to receive a reminder email from
Mr. Arismendi before the start of the rotation

MDI 8676 1

Full-time (4 weeks)

(FH) Florida Hospital, South

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Matthew Albert

Contact person: Leslee Cunnion, Residency

Coordinator, (407) 303-5191;

leslee.cunnion@flhosp.org

Maximum Enrollment: 1 each block

The University Of Central Florida College Of Medicine M4 Acting Internship in Colon and Rectal Surgery will build upon the M3 experience in General Surgery and further explore the workup, diagnosis, treatment and follow up of a wide variety of surgical diseases involving the colon, rectum and anus. There will a broad experience caring for patients with inflammatory bowel disease. Evidence based practices will be emphasized. The student will spend 4 weeks on the colon and rectal surgical service. Students will be responsible for the evaluation and workup of patients in the emergency room and wards as well as in the outpatient setting. Participation in daily inpatient multidisciplinary ward rounds will be emphasized as well as active participation in a wide array of bedside surgical procedures and major operative interventions under general anesthesia. Call will occur from home and will occur no more than twice per week and may include weekend call and weekend ward rounds. The student will also be responsible for regular attendance at weekly didactic conferences, grand rounds, journal club conferences and morbidity and mortality conferences and simulator/animal lab experiences when offered.

Objectives:

Medical Knowledge

1. Learn fundamentals of basic science as they apply to the clinical practice of colorectal surgery. *Examples include in knowledge of anorectal anatomy, normal colonic function, risk factors for colorectal cancer, tumor markers, patterns of metastatic spread, etiology of perirectal abscess, and pathology of inflammatory bowel disease.*
2. Understand GI anatomy and physiology, GI diseases, diagnosis and management and risks and complications of GI endoscopy.
3. Understand the indications and recommendations for surveillance and diagnostic endoscopy.
4. Develop a meaningful differential diagnosis and appropriate diagnostic plan for the evaluation of common colorectal disorders.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Acting Internship in Colon and Rectal Surgery—Continued

Clerkship Director: Matthew Lube, M.D.

5. Develop knowledge of surgical pathophysiology, pharmacology, physiology in diagnosing and managing the patient with colorectal disease.
6. Formulate a minimal diagnostic and treatment plan for colorectal disease requiring surgical intervention.
7. Understanding of the roles of surgery, chemotherapy, and radiation therapy as measures in the total management of the colon cancer patient.
8. Develop some understanding of the roles of surgery and pharmacology in the total management of patients with inflammatory bowel disease.

Patient Care

1. Assist the resident staff with elective admissions to the service; perform an accurate history and physical examination.
2. Assist in the performance of basic surgical procedures such as flexible and rigid proctoscopy, anoscopy, anorectal procedures, and routine wound closure.
3. Arrive in the OR prepared for the procedure.
4. Assist in the discharging patients.
5. Attend and participate in continuity of care clinics: examination and evaluation, peri and post-operative care, and surgical consultations under resident and attending supervision.
6. Develop a working knowledge of the common colorectal disorders encountered and managed in the outpatient setting.

Interpersonal and Communication Skills

1. Develop skill and sensitivity for appropriate counseling and educating patients and their families in a variety of colorectal disease.
2. Work effectively with others.
3. Effectively and promptly document practice activities.
4. Presents all patients to the attending in a concise, organized, logical and knowledgeable manner.
5. Prepare and present presentations as assigned.

Practice-Based Learning and Improvement

1. Use books, journal articles, and internet access to learn about diseases and treatment of patients with colorectal pathology and to support own education.
2. Attend outpatient colorectal clinics at least one day per week.
3. Attend all colorectal and general surgery conferences.

Systems-based Practice

1. Effectively communicate with patients, families, nurses, OR techs, anesthesiologist, pharmacy, home health, and other allied health care personnel
2. Learn how types of medical practice and delivery systems differ from one another, including methods and controlling health care costs and allocating resources

Professionalism

1. Demonstrate a commitment to ethical principles pertaining to provision or withholding of clinical care, confidentiality of patient information, informed consent, and business practices.
2. Demonstrate sensitivity and responsiveness to patients' culture, age, gender, and disabilities.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Acting Internship in Colon and Rectal Surgery—Continued

Clerkship Director: Matthew Lube, M.D.

Procedures

The fourth year medical student will have the opportunity to observe and assist in the performance of flexible sigmoidoscopy and colonoscopy. They will develop a sound knowledge base of the indications and contraindications for various endoscopic procedures. The opportunity will exist to observe and assist on a wide variety of surgical procedures performed under local and general anesthesia.

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE

First Day: Report to Nemours Children's Hospital lobby @ 8:30 am

The University Of Central Florida College Of Medicine M4 Acting Internship in Pediatric Surgery will further expose the student to the workup, diagnosis, treatment and follow up of a wide variety of pediatric surgical diseases. Evidence based practices will be emphasized. The student will spend 4 weeks on the pediatric surgical service. Students will be responsible for the evaluation and workup of patients in the emergency room and wards as well as in the outpatient setting. Participation in daily inpatient multidisciplinary ward rounds will be emphasized as well as active participation in a wide array of bedside surgical procedures and major operative interventions under general anesthesia. In hospital call will be a requirement and will occur no more than twice per week and may include weekend call. The student will also be responsible for regular attendance at weekly didactic conferences, grand rounds, journal club conferences and morbidity and mortality conferences and simulator/animal lab experiences when offered.

Objectives:

Medical Knowledge

1. Learn the fundamentals of basic science as applied to pediatric surgery. *Examples include embryologic development of the peritoneal cavity, normal rotation and fixation of the abdominal viscera, the physiologic changes of birth, fluid, and electrolyte requirements by weight, normal physiologic parameters in newborns and children, and major physiologic differences of babies and children compared to adults.*
2. Recognize common surgical problems and emergencies in newborns. *Examples include: omphalocele, gastroschisis, imperforate anus, meconium ileus, Hirschsprung's disease, pyloric stenosis, and undescended testis.*

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Acting Internship Pediatric Surgery—Continued

3. Recognize common surgical problems and emergencies in children. Examples include: *inguinal hernia, hydrocele, intestinal intussusception, and appendicitis.*
4. Utilize appropriate diagnostic laboratory procedures as applied to pediatric surgery patients ex: *arterial blood gas analysis, hematologic profiles and coagulation assessment, hepatic function tests, and serum chemistries.*
5. Utilize appropriate diagnostic imaging studies in infants and children ex: *chest radiographs, abdominal ultrasonography, and contrast studies of the esophagus, stomach, intestine, and colon.*
6. Understand the physiology, fluid and electrolytes, nutrition, pulmonary function and hemodynamics of children.
7. Understand the pathology of pediatric disease, pediatric anatomy and special pharmacology aspects of pediatrics.
8. Assist in the management of the pediatric trauma patient.

Patient Care

1. Recognize surgical complications (i.e. post-operative fever, abdominal pain, airway distress, GI obstruction and bleeding).
2. Assist in the workup of new admissions, including history and physical examination appropriate for age, calculation of fluid requirements, and development of a plan.
3. Assist in the care of all inpatients on the pediatric service, including daily assessment, evaluation of new problems, and preoperative preparation.
4. Assist in the initial evaluation of all consults in the emergency department and on other hospital services.
5. Arrive in the OR prepared for the procedure.
6. Assist in the process of discharging patients.

Interpersonal and Communication Skills

1. Work effectively with the health care team and/or other professional groups.
2. Present all patients in a concise, organized, logical and knowledgeable manner.
3. Utilize input from collaborative interactions with those contributing to patient care.
4. Exhibit the ability to interact as part of the surgical team.
5. Exhibits honesty, reliability, good communication skills, and appropriate judgment.

Practice-Based Learning and Improvement

1. Use textbooks, journal articles, internet access, and other available tools to learn about diseases of infants and children.
2. Effectively and promptly documents practice activities.

Systems-Based Practice

1. Communicate with families, under the supervision and guidance of the senior resident and attending.
2. Communicate with nurses, physician extenders, social workers, and allied health care personnel about the care of pediatric surgery patients.
3. Appreciate the specific needs of infants and children that are different from those of adults.

Professionalism

1. Demonstrate respect, compassion and integrity and a dedication to professionalism and life-long learning.
2. Demonstrate a commitment to ethical principles pertaining to provision or withholding of clinical care, confidentiality of patient information, informed consent, and business practices.
3. Demonstrate sensitivity and responsiveness to patients' culture, age, gender, and disabilities.
4. Demonstrate accountability for actions and decisions.

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Acting Internship

Acting Internship in Neurosurgery

Clerkship Director: Michael Bellew, M.D.

MDI 8650 1

Full-time (4 weeks)

(FH) Florida Hospital Orlando

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Michael Bellew

Michael.bellew@ucf.edu

Contact person: Vanessa Wise

407-691-8035; vanessa.wise@ucf.edu

Maximum Enrollment: 1 per block (except block 4)

First Day: Three weeks prior to the start of the rotation email Vanessa Wise and Dr. Bellew to arrange a meeting to discuss individual goals and objectives. Report to 601 E. Rollins St, Orlando, FL-Ginsburg Tower 3RD floor neurosurgery @ 6:00 am

The 4th year student is expected to function at the level of an intern. Responsibilities include initial patient evaluation in the emergency department, clinic, and inpatient setting; continuity of care through inpatient rounding; development of surgical technique; and call / weekend duties averaging 1 in 4. Rounds are conducted daily. Weekly conferences include Neuro ICU Medical Director Rounds, and Tumor Board. The student is expected to write a case report or focused literature review.

Objectives:

1. Manage elevated intracranial pressure and status epilepticus.
2. Recognize neurosurgical emergencies involving the brain, spine, and peripheral nerves.
3. Develop a strategy to recommend a "next step" at all time points of patient management.

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Acting Internship

Acting Internship in Clinical Neurological Ophthalmology

MDI 8802 9

Full-time (4 weeks)

(PO) Medical Eye Associates

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Mont Cartwright

rockerdoc@aol.com

Contact person: Anita Miller, (407) 933-7800 ext. 130;

amiller@medeyedoc.com; Peter Sefcik,

marketing@medeyedoc.com

Maximum Enrollment: 2

First Day: Contact Anita Miller 2 weeks before the start of the rotation. On the first day report to Medical Eye Associates at 921 Main St., Kissimmee, FL 34744 @ 8:00 am.

The neuro-ophthalmology rotation is designed for medical students who are interested in ophthalmology as a specialty. This course introduces students to neuro-ophthalmology. Students will observe patients with Dr. Mont Cartwright, and gain exposure to Humphrey and Goldmann visual fields, optical coherence tomography, fundus photography, and the neuro-ophthalmologic exam. The rotation offers direct one-on-one teaching with Dr. Cartwright. As opposed to other ophthalmic rotations, no particular additional skill other than those already possessed by a typical medical student (e.g., handlight, direct ophthalmoscope, confrontation visual fields and mortality assessment) are required for the rotation. The rotation also might be suitable for medical students interested in neurology, neurosurgery, neuroradiology, or interventional radiology, as there is considerable overlap in these fields with neuro-ophthalmic patients.

Learning Activities:

The student time commitment shall be from Monday to Friday, 8:00 am to 5:00 pm. There is no mandatory student call, night, after hours, or weekend responsibility. Journal club weekly, hospital rounds, clinic outpatients, hospital/ambulatory surgery assistance/observation, one-on-one interaction with instructor. No pre-requisite readings are required but students may be asked to research small case vignettes or present at ophthalmology grand rounds during the rotation.

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Acting Internship

Acting Internship in Oculo-Facial Plastic and Reconstructive Surgery

MDI 8900 9

Full-time (4 weeks)

(PO) Medical Eye Associates

Grading Basis: ABCF

Primary Faculty Supervisor: Dr. Mont Cartwright

marketing@medeyedoc.com

Contact person: Anita Miller, (407) 933-7800 ext. 130;

amiller@medeyedoc.com; marketing@medeyedoc.com

Maximum Enrollment: 1

First Day: Contact Anita Miller 2 weeks before the start of the rotation. On the first day report to Medical Eye Associates at 921 Main St., Kissimmee, FL 34744 @ 8:00 am.

This rotation will provide greater exposure to diagnosis, management and surgical correction of ophthalmic and reconstructive disorders.

Goals of the rotation:

- The overall goal and objective is to complement the basic knowledge gained in the ophthalmology program and to provide greater exposure to the diagnosis, management, and surgical correction of ophthalmic plastic and reconstructive disorders.
- During this rotation, the students will be responsible for the day-to-day management of patients. The rotation will provide education in the care and management of patients. The student will have the opportunity to become knowledgeable about the procedures in oculo-facial plastic and reconstructive surgery.
- The focus of patient care will be on all aspects of patient's that are treated by oculo-facial plastic and reconstructive surgery. The student will be actively involved with teaching rounds, clinical care conferences, journal club, radiology conferences, follow up clinic, and multidisciplinary planning. The student is expected to make a case presentation or journal club at the end of their rotation.
- Provide a well-rounded experience with emphasis on basic principles, techniques, patient selection and patient management. Students will participate in outpatient settings with the emphasis on outpatient experience.

Learning Objectives:

The medical student is expected to provide family-centered patient care that is compassionate, appropriate and effective for the promotion of health, prevention of illness, and treatment of disease. The medical student will interact with the oculo-facial plastic and reconstructive surgeon using evidence based decision-making and problem-solving skills. Acting interns should have experience in the following specific areas

- (a) Anatomy and physiology of the orbit, eyelids, lacrimal system, nose, sinuses, and head and neck
- (b) Common orbital disorders of adults including orbital cellulitis, thyroid orbitopathy, idiopathic orbital inflammation, vasculitis, congenital tumors, vascular tumors, neural tumors, lacrimal gland tumors, fibro-osseous tumors, histiocytic diseases, lymphoid tumors, metastatic tumors, blunt and penetrating trauma, orbital and facial fractures, an ophthalmic socket problems and skull base disease

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

**Acting Internship in Oculo-Facial Plastic and Reconstructive Surgery
Continued**

- (c) Eyelid including congenital syndromes, inflammation, trauma, ectropion, entropion, trichiasis, blepharoptosis, eyelid retraction, dermatochalasis, blepharochalasis, eyelid tumors, blepharospasm, facial nerve palsy, eyebrow, midface and lower face function and aesthetics, and histology and pathology of the facial skin including medical and surgical management of these conditions
- (d) Regional anatomy including graft donor sites frequently used such as cranial bone, ear, nose, temporal area, mouth and neck, abdomen, buttocks, legs, supraclavicular area and arm.
- (e) Fundamentals of ocular and orbital anatomy, chemistry, physiology, microbiology, immunology, and wound healing;
- (f) Experience in neuroradiology for radiologic interpretation of images (CT, MRI, MRA, arteriography, ultrasound)
- (g) Ocular Pathology to interpret ocular and periocular pathology and dermatopathology
- (h) Understanding and interpreting imaging techniques;
- (i) The principles of plain films, CT, MRI, and ultrasound imaging relating to the head and neck with particular emphasis on the orbit;
- (j) The type of scan/imaging to order, given the clinical setting and be able to read the film or scan; and,
- (k) Skills in the use of information technology for study of reference material, including electronic searching and retrieval of relevant articles, monographs, and abstracts.
- (l) Demonstrate consistent skill in gathering accurate, essential information from all sources, including medical interviews, medical records, and diagnostic/therapeutic procedures
- (m) Gain competence in the physical examination of oculo-facial plastic and reconstructive surgical candidates

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Acting Internship

Acting Internship in Allergy / Asthma / Immunology

MDI 8300

Full-time (4 weeks)

(PO) Anderson Allergy & Asthma

Grading Basis: ABCF**

Primary Faculty Supervisor: Dr. Michael Anderson

Contact Person: Cheryl Bergin, 407-872-1110 ext. 111;

Cheryl@andersonallergy.com

Maximum Enrollment: 1 per block

**First Day: Report to Anderson Allergy & Asthma, 63 W.
Underwood St., Orlando 32806 at 9:00 am**

This rotation will expose the student to commonly encountered problems in allergy such as sinus illness, skin disorders, asthma & immune deficiencies. The student will do initial work ups including history and physical to present patients to myself and nurse practitioner. They will then learn how to manage these problems.

Goals Objectives:

- Recognize clinical patterns of common allergic disease such as allergic rhinitis & asthma. Learn the proper methods of work ups & evaluations.

Learning Activities

The student will each day interview new patients then present their history and physical, suggest testing options, then therapeutic options. He will then discuss these options with the MD and help explain these options to the patient. Follow up appointment with his patient will be arranged for continuing care.

ELECTIVES

Interdepartmental

4th Year Elective in Patient Safety

Clerkship Director: Bethany Ballinger, M.D.

MDE 8035 1

Full-time (4 weeks)

(FH) Florida Hospital Celebration

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Fortune Alabi &
Dr. Fred Umeh

Contact person: *Jacqueline Blanco, CMOM,*
(407) 507-2615; Jacqueline@floridalungdoctors.com

Maximum Enrollment: 2-3 each block

First Day: Report to FH Celebration Health, 3rd Floor
nurse's station at 9:00 am.

This elective is designed to explore the fundamental issues in defining, measuring, and improving healthcare quality and safety. The student will gain an appreciation for how healthcare quality is defined and of the practical application of evidence-based medicine.

It would be of interest to students who are leaders and are considering a career in surgery or any area of hospital based medicine both clinical and administrative. It is a hands-on, practical elective showing how the Safety and Quality concepts, introduced by the WHO patient safety curriculum and delivered in the preclinical years, have practical application to the safer practice of medicine

Objectives:

1. Understand the complex interaction between the health care environment, doctor and patient.
2. Aware of mechanisms that minimize error, e.g., Checklists, clinical pathways.
3. Know the main sources of risk in the clinical workplace.
4. Understand how personal limitations contribute to risk.
5. Promote risk awareness in the workplace.
6. Understand the nature of error and how healthcare can learn from error.
7. Understand the harm caused by errors and system failures.
8. Aware of principles of reporting adverse events.
9. Understand the relationship between human factors and patient safety.
10. Apply human factor thinking to the workplace environment.
11. Understand the importance of teamwork in healthcare.

ELECTIVES

Internal Medicine

Emergency Ultrasound Elective

MDE 8773

First Day: Report to Florida Hospital East @ 8:00 am

Part-time (2 weeks)

(FH) Florida Hospital East Orlando

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Alfredo Tirado-Gonzalez

Contact Person: Katherine Bradford, (407) 303-6413;

Katherine.bradford@flhosp.org

Maximum Enrollment: 1 per block

The primary goal for the emergency ultrasound point of care elective is to provide the knowledge, skill, and experience to perform focused bedside ultrasound (US) examinations as a means to provide immediate information and answer specific questions about patients' physical conditions and care.

Objectives:

Patient Care: Gather accurate, essential information in a timely manner from all sources, including medical interviews, physical examinations, medical records, and diagnostic/therapeutic procedures. Integrate diagnostic information and generate an appropriate differential diagnosis.

Medical Knowledge: Understand the basic principles of medical ultrasonography with the potential risks and benefits to the patient. Demonstrate the ability to appropriately use the ultrasound machine to obtain basic images. Demonstrate the ability to identify basic ultrasound anatomy. Understand the appropriate use of ultrasound in the diagnosis of common medical problems. Demonstrates adequate foundation of knowledge in US applications: FAST, Aorta, Renal, First Trimester Bleeding, Echo, Gallbladder, and Procedural ultrasound.

Practice Based Improvement: Locate, appraise, and assimilate evidence from scientific studies related to the health problems of their patients. Use information technology to manage information, access online medical information, and support their own education.

Interprofessional and Communication Skills: Demonstrate the ability to respectfully, effectively, and efficiently develop a therapeutic relationship with patients and their families. Demonstrate effective participation in and leadership of the health care team.

Professionalism: Arrive on time and prepared to work. Demonstrate appropriate use of symptomatic care. Treat patients/family/staff/paraprofessional personnel with respect. Protect staff/patient's interests/confidentiality. Accept responsibility/accountability for patient care activities.

FOURTH YEAR (M4)

ELECTIVES
Internal Medicine

Urology Elective

Clerkship Director: Hubert Swana, M.D.

MDE 8675

Full-time (4 weeks)

First Day: TBD

(OH) Arnold Palmer Hospital

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Hubert Swana,

Hubert.swana@orlandohealth.com

Contact person: Sandra Ingram, (321) 841-3715;

sandra.ingram@orlandohealth.com

Maximum Enrollment: 1 each block

After completing the urology rotation you will have improved your ability to evaluate urology patients and formulate a treatment plan. Additionally, you will improve your operative skills and exposure to urologic procedures.

Objectives:

1. The medical students along with the mid-level providers are expected to take primary responsibility for all patients on the in-patient and consultation urology service.
 - a. Mid-level providers (Physician Assistants and Nurse Practitioners) work on the urology service. The medical students are encouraged to communicate often with the appropriate resident, fellow, or mid-level providers in regard to specific patient care. The attending, resident, fellow, or mid-level providers will assign the medical student tasks.
 - b. Students will be assigned in-patients and consults to follow. Prior to going to the OR or clinic in the morning the students are expected to round on their patients along with the urology team. Students should write a progress note but not put it into the patient's chart. The note should be reviewed with the attending, resident, fellow, or mid-level providers who will write the note in the patient's chart. This note should include but not be limited to: report on significant events from the previous day/night, laboratory studies, vital signs, intake (oral and IV) and output of fluids (including drains) and physical exam for the past 24 hours. The student should show their progress note to the attending for feedback.
 - c. The medical student, resident, fellow, and mid-level providers will be encouraged by each attending physician to work together as a team and divide tasks appropriately in order to better complete the morning's work.
2. The medical student is expected to experience and participate in the full spectrum of perioperative patient care. The priorities of medical student assignment after completion of morning "rounds" are as follows in order of importance.
 - a. **Surgical Procedures:** Specifically the medical student in conjunction with the resident, fellow, and mid-level providers is expected to evaluate emergency and inpatient consultations, form a diagnosis and initial plan, and discuss each with the attending urologist on call. All consultations are to be filled out on the written comprehensive

The student is exposed to one of the largest group dermatology practices in the country. The practice has over 50 office sites in 50 cities in Florida. Opportunities to work in several offices will expose the student to almost all aspects of diagnosis and treatment within general dermatology (pediatric to geriatric), surgical dermatology (routine, Moh's, laser), cosmetic dermatology (lasers, fillers, cosmetic surgery, hair transplantation, aesthetic services), and dermatopathology. In addition, the student will be able to participate in or observe ongoing clinical research studies (phase II-IV). Furthermore, the student may choose to be instructed in centralized, multiple office management. Emphasis is placed on treating the patient's current problem while repairing the underlying skin abnormalities to reduce risks of further problems. The student is expected to function as a member of the office team. The student, with the help of the office manager, will arrange weekly rotations through several offices to provide the broadest experience possible.

Objectives:

1. The student increases his/her basic clinical knowledge and ability to communicate, discuss cases and interact with staff, patients, and research subjects in an intelligent and thoughtful way and responds to clinical questions appropriately as knowledge of the field increases.

Maximum Enrollment: 1 each block

First Day: Report to 1223 Gateway Drive, Melbourne, FL
32901, 2nd floor Administration @ 8:30 a.m.

This four week experience will provide advanced clinical training in the outpatient care of adult pulmonary medicine patients in the outpatient setting. The student will assume intern level responsibility for his/her patients and will be expected to see/provide care for approximately eight or more patients daily.

Objectives:

1. Demonstrate ability to assess and care for adult patients in the outpatient setting, initially and in an ongoing fashion.
2. Demonstrate appropriate communication skills, with colleagues (oral and written presentations), patients and families.
3. Demonstrate professional behavior at all times.

Advanced ECG Self-Study Program

MDE 8227

First Day: UCF COM room 406P at 8:00 am.

Part-time (2 weeks)

(UCF COM) UCF COM and UCF Health Clinic

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Bernard Gros

Contact Person: Dr. Bernard Gros, 407-266-1180;

bernard.gros@ucf.edu

Maximum Enrollment: 2 per block (November through April only)

Note: This course requires some in person sessions with the instructor.

Please communicate your availability to the instructor at least 2 weeks before the start of the rotation.

The primary goal of this rotation will be mastering the art and practice of clinical ECG interpretation. This will focus on the following areas: 1) The basics, 2) Myocardial abnormalities, 3) Conduction abnormalities, 4) Arrhythmias, 5) Narrow & wide complex tachycardias, 6) Paced rhythms, channelopathies and electrolyte disturbances.

Upon completion of this 2 week session, the students will have reviewed 400-600 case studies. This will provide them with a broad and in-depth understanding of ECG analysis and diagnosis.

Learning Activities:

1. Self study case reviews by student (Using Podrid's ECG Series)
2. Additional literature review ECG topics.
3. Weekly presentations to faculty on assigned ECG/Cardiovascular topics.
4. Weekly conference/faculty discussions to assist in instruction and understanding of ECG interpretation.

Required Texts:

- 1) Podrid's Real World ECG - Volume 1-4 (Volume 5-6 once released) - student will need to purchase to obtain additional access to online case files
- 2) Marriott's Practical Electrocardiography 12th edition

Full-time (4 weeks)

(PO) Advanced Dermatology & Cosmetic Surgery

*This site is more than 50 miles from the COM

Grading Basis: Pass/Fail

Primary Faculty Supervisors: Dr. James Solomon

Drjsolomon@ameridermresearch.com

Contact person: Sandra Davis, Office Manager

(386) 523-0768; sdavis@ameridermresearch.com

Maximum Enrollment: 1 each block

First Day: Report to 725 West Granada
Blvd., Suite 44, Ormond Beach, FL 32174
@ 9:00 a.m.

The student is exposed to one of the largest group dermatology practices in the country. The practice has over 50 office sites in 50 cities in Florida. Opportunities to work in several offices will expose the student to almost all aspects of diagnosis and treatment within general dermatology (pediatric to geriatric), surgical dermatology (routine, Moh's, laser), cosmetic dermatology (lasers, fillers, cosmetic surgery, hair transplantation, aesthetic services), and dermatopathology. The student with the help of the office manager, will arrange weekly rotations through several offices to provide the broadest possible. No night call or weekends required.

Objectives:

1. The student increases his/her basic clinical knowledge and ability to conduct clinical research within dermatology, to communicate, discuss protocols, and data. The student will interact with staff, investigators and industry representatives throughout the world, in an intelligent and thoughtful way, and responds to clinical questions appropriately as knowledge of the field increases.
2. The student learns about the import of Good Clinical Practices and maintaining patient safety throughout any clinical field.
3. The student learns to create protocols, enter data and develop reports.
4. The student is exposed to new drug development as well as studies which expand the use of current medications and/or retest the safety profiles.
5. The student is exposed to the complexities of the business aspects of a clinical research and medical practice.
6. The student gains an understanding in which cosmetic dermatology is used as a methodology to enhance the appearance of the skin by repairing damage done through sun, trauma, and/or skin disease.

Integrative Medicine Elective

MDE 8391

Full-time (4 weeks)

First Day: Report at 8:30am on first day of elective

(UCF COM) UCF College of Medicine

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Christopher Smith

Christopher.smith3@ucf.edu

Contact person: Christopher Smith, 407-883-1102;

Christopher.Smith3@ucf.edu

Maximum Enrollment: 35 students (5 minimum)

Block 10 only

Introductory sessions and workshops will be presented by community practitioners and preceptors focusing on different modalities of integrative medicine: botanicals, homeopathy, mind/body, nutrition, traditional Chinese medicine, osteopathy, and energy medicine. The rotation also includes presentations by UCF COM faculty and guest speakers/practitioners on a variety of topics like an introduction to integrative medicine (1M), 1M research, the difference between 1M and complementary and alternative medicine, and 1M approaches to various health conditions. Additionally, an important aspect of the rotation is a focus on personal growth and reflection as well as community building within each cohort. The students are expected to evaluate the claims of various practices critically and be rigorous in their questioning of all forms of human healing including practices currently considered mainstream. The students are expected to become aware of various practices that patients may be using so that they can be better-informed physicians and be more comfortable in discussing these areas with patients whom may be interested in using them or are already doing so. The students should also learn to communicate effectively with practitioners of complementary and alternative medicine therapies.

Learning Objectives:

-Patient care:

The student will learn about appropriate application of integrative and functional medicine paradigms and how they can be considered as part of comprehensive patient care.

-Medical Knowledge:

Summarize the state of knowledge and data of complementary and alternative medicine therapies within an objective critical review of the literature. Familiarize students with the risk, benefits and clinical applications of these particular disciplines.

-Practice Based Improvement:

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Integrative Medicine Elective continued

Students should be able to explore their roles as allopathic health-care providers able to make appropriate referrals and answer patients' questions regarding CAM therapies

-Interprofessional and Communication Skills:

Encourage students to communicate with all types of health-care providers who might be offering complementary and alternative medicine therapies

-Professionalism:

Recognition of the essential elements of the application of integrative therapies, including moral and ethical principles and legal responsibilities underlying the profession. Professional values which include excellence, altruism, responsibility, compassion, empathy, accountability, honesty and integrity, and a commitment to scientific methods.

-Systems Based Practice:

The student will be familiar with application of preventative, wellness-based therapies and the utility in the processes in a health delivery system to provide cost effective individualized care in addition to population based approaches. This is in context of appointment and referral systems.

Learning Activities:

-Group lectures and demonstrations on campus or at UCF Gateway clinic.

-Clinical observation in various practitioners' offices.

-Independent study including reading, library research, further experimental investigation of an area of particular interest to the student, which will culminate in the presentation of a written paper to the entire group during the last week of the course.

-Individual experiences that provide personal balance for the students and expose them to a new personal mind-body practice, which they can incorporate into lifelong individual health habits such as meditation, yoga, etc.

Maximum Enrollment: 2 per block

The student will participate in a busy gynecologic oncology service, working with two experienced surgeons and educators. He/she will scrub into a large volume and variety of surgeries for gynecologic tumors/cancers (endometrial, ovarian, cervical, vulvar). By examining the patients under anesthesia, the student will gain skill in pelvic and abdominal examination and encounter significant abnormalities. The student will see very detailed pelvic and abdominal anatomy and be able to correlate this anatomy with disease processes and surgical management. The student will experience how patients with these significant disease processes present in the outpatient setting. The student will gain proficiency in presentation of patients on rounds and perioperative care. The student will gain experience in palliative care.

Objectives:

1. Gain proficiency in abdominal and pelvic examination of the adult female. Hone skills in the presentation of patients. Learning about the organization and purpose of a tumor board. Experience palliative care of cancer patients.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Gynecologic Oncology Elective continued

Learning Activities

1. The student will examine patients and scrub into surgery, working with both gynecologic oncologists, acting as a first assistant in a large percent of the cases. They will see patients with the attending in the outpatient setting and be given the opportunity to interact with patients. The student will be part of the team on daily rounds and be expected to closely follow and present some of the patients, including formulation of care plans. The student will be present and, to a limited extent, participate in weekly tumor board. The student will be given reading assignments that will correlate with the patient care they are experiencing. Literature searches and/or reviews will be requested in selected circumstances (important or unusual clinical scenarios). For the interested student, participation in a clinical research project may be offered.

Maximum Enrollment: 1 per block (Blocks 2, 4, 6 and 9 only)

First Day: Report to 1530 Celebration Blvd, Suite 408,
Celebration, FL @ 8:00 am

The Gynecology Elective focuses on all aspects of gynecologic care of the patient. The student will evaluate and propose course of treatment for commonly encountered gynecologic health issues. The student will develop differential diagnosis and propose treatment plans that are appropriate. Expected conditions to be encountered include management of abnormal cervical cytology, abnormal uterine bleeding across all age groups, vulvar disorders, fibroids, adenomyosis, endometriosis, and complex gynecological surgical procedures. Students will work team Nurse Practitioners in completing well-women examinations and evaluating breast disease. The student will be expected to have learned basics of gynecologic outpatient procedures such as endometrial biopsy, intrauterine device placements for contraception, colposcopy basics, and performance of breast and pelvic examination, including collection of specimens for cytology. The student will also be expected scrub and assist with all surgical cases.

Learning Activities

Student will be an active team member of all patient encounters. The student will assist with admissions, round pre-op and post op on all surgical patients. The student will prepare 2 presentations to be delivered to the team regarding gynecologic care of patients. These presentations will incorporate literature reviews and case-based presentations with a discussion.

A 1-4 week rotation will be developed by the elective faculty and the student based on individual student goals. Core competencies to be achieved during the elective include general eye examination and ophthalmoscopic examination skills and exposure to ophthalmic surgery. For more advanced students or those available for longer time commitments, students will assist in ophthalmic surgical procedures, workup and presentation of ophthalmic cases to faculty and have the opportunity to present and or write a case report for publication. There are no weekend clinics outside of call. Call will be limited to accompanying staff to after-hours emergency evaluations (rare).

Objectives:

1. Achieve proficiency in the evaluation of patients with ocular disorders.
2. Establish familiarity within common eye conditions and their treatment.
3. Recognize ocular manifestations of systemic disease.
4. Become familiar with the clinical procedure ophthalmology.

Maximum Enrollment: 1 each block

First Day: Report to Center for Retina & Macular Disease, 250 Ave. K, SW, Suite 200 Winter Haven, FL @ 9:00 a.m.

Students will have the opportunity to observe the implementation of clinical trials at an ophthalmology subspecialty (retina) clinic. They will gain exposure to the various phases of clinical trials and how basic science research is applied in clinical practice. Students will observe clinical trial data collection and treatment administration. Students will participate in the examination of retinal patients and be introduced to advances in diagnostic and therapeutic technology. Students will also have the opportunity to design a retrospective clinical research project that could lead to publication. There will be no weekend or on-call activities. This elective will benefit those seeking future careers in ophthalmology or in other clinical subspecialties where an understanding of clinical research is important.

Objectives:

1. Achieve familiarity with clinical trials and how clinical trials are designed.
2. Understand the role the FDA plays in approving therapeutics and devices.
3. Develop additional experience with the funduscopy examination.
4. Recognize retinal manifestations of systemic disease.
5. Become familiar with the workings of a modern ophthalmology subspecialty (retina) practice.

This two or four-week elective rotation, open to fourth year medical students, will provide a broad learning experience in pediatric Nephrology. Learning will occur through direct provision of care to children requiring Nephrology consultation. Learning will also occur through formal and informal didactic presentations, bedside teaching, and through directed and undirected reading. The medical student will serve as an integral part of the care team, providing direct patient care as appropriate under the supervision of the Nephrology attending.

The overall goal of the Nephrology elective is to acquire an in-depth knowledge and experience with commonly encountered renal problems of infants and children. This elective also includes adequate time to pursue readings that focus on pathophysiology of disease processes. With this information as a background, the Medical student will acquire a good understanding of the management and long-term outcomes of common renal disorders in children.

During the rotation, the medical student will, under the guidance of a supervising Nephrology physician, evaluate, examine, discuss, treat, and follow hospital inpatients and outpatients with proven or suspected Nephrologic diseases, including, but not limited to, those with hematuria, proteinuria,

Maximum Enrollment: 1 each block

Pediatric hematology and oncology including bone marrow transplant. On this rotation the student will be exposed to a wide spectrum of pediatric hematology and oncology diseases. Patient care and consultation experience will be provided primarily in the pediatric hematology/oncology clinic, as well as through inpatient consults, and inpatient experience can be obtained if desired. The student will observe lumbar puncture and bone marrow examination procedures. Students will spend approximately one day with the hematopathologist examining normal and abnormal peripheral blood smears and bone marrow slides.

Objectives:

1. Learn how to diagnose and treat hematologic problems in children.
2. Understand mechanisms of immune manipulation in pediatric BMT.
3. See and understand common childhood malignancies.

Maximum Enrollment: 1 each block

Students will become familiar with the systematic approach to evaluating a patient with a known or suspected genetic, cytogenetic, metabolic or dysmorphic order.

Objectives:

1. Students will be able to perform a physical examination with emphasis on identifying and describing congenital anomalies and dysmorphic features.
2. Students will be able to elicit and construct three generation pedigree (family tree).
3. Students will become familiar with how genetic counselors and geneticists approach counseling for conditions with Mendelian inheritance patterns (autosomal dominant, autosomal recessive, and X-linked) and non-Mendelian inheritance patterns (mitochondrial, inheritance, multifactorial conditions and chromosomal abnormalities).
4. Students will become familiar with on-line resources that are available for physicians caring for patients with genetic disorders.
5. Students will become familiar with community resources and support groups for individuals and their families who have a genetic disorder.
6. Students will learn the common indications for referring a patient to genetic services.

Maximum Enrollment: 1 each block

First Day: Report to OH GME, 86 W. Underwood St., 1st floor lobby, Orlando, FL @ 10:00 am where you will meet with Sandra Ingram and Alexander Arismendi. You should expect to receive a reminder email from Mr. Arismendi before the start of the rotation

The program emphasizes the use of multiple disciplines and community resources that specialize in developmental issues. The student will participate in a structured experience in normal and abnormal behavior and development. Participants are scheduled for two half-day assignments each day. Assignment sites include but are not limited to special education programs, early intervention agencies, neurology clinics, and developmental evaluation clinics. Speech and language evaluations, as well as occupational and physical therapy sessions will also be attended. Participants will be given the opportunity to learn about normal and abnormal development issues of children, premature through adolescence. Opportunities for hands-on experience with special needs children and their families are provided.

Objectives:

1. Recognize age appropriate behavior and development.
2. Conduct basic age appropriate developmental testing.
3. Describe community based services available to evaluate and treat children with developmental delays.
4. Demonstrate proficiency in counseling parents about common behavior problems, to include: enuresis, sleep disturbances, temper tantrums, and needs for discipline/limit setting.
5. Demonstrate proficiency in the evaluation of a child with suspected attention deficit hyperactivity disorder (ADHD).
6. Demonstrate proficiency in the management of a child with suspected attention deficit hyperactivity disorder (ADHD).

Maximum Enrollment: 1 each block

This clinical course will be based on basic respiratory physiology and will include a variety of clinical pulmonology experiences such as infectious disease of the lungs, hypersensitivity lung disease, cystic fibrosis, asthma, pulmonary reactions to chemical injury and trauma, radiologic evaluation of lung disease, pulmonary pathology, flexible bronchoscopy, pulmonary function testing, exercise physiology, sleep disordered breathing, apnea of prematurity/infancy, congenital disorders of the respiratory tract, home ventilation and chronic lung disease of infancy. Patient care and consultation experience will be gained on the inpatient services, intensive care units, and in the pediatric pulmonology clinic. In addition, the student will spend time in the pediatric pulmonary function and sleep laboratories.

Objectives:

1. Describe normal patterns of breathing in infants and children.
2. Demonstrate proficiency in the examination of the respiratory system.
3. Diagnose and treat asthma according to national guidelines.
4. Demonstrate proficiency in the management of children with cystic fibrosis.
5. Describe strategies for managing the complexities of the treatment of BPD.
6. Interpret basic pulmonary function testing in children.

On this rotation the student will be exposed to a wide spectrum of pediatric gastrointestinal and liver diseases. Patient care and consultation experience will be provided in the pediatric gastroenterology clinic, inpatient service and intensive care units. The student will participate in a full range of endoscopic, monomeric and biopsy procedures.

Objectives:

1. Describe normal feeding patterns from infancy through adolescence.
2. Explain how differential diagnosis and work-up is used for the evaluation of chronic recurrent abdominal pain in the pediatric patient.
3. Evaluate a child with abnormal liver function tests.
4. Evaluate a child with gastroesophageal reflux.
5. Manage a child with gastroesophageal reflux.
6. Describe a diagnostic approach for the child with vomiting or hematochezia.

Maximum Enrollment: 1 each block (None in block 5
or 11)

First Day: Report to 89 West Copeland Drive, Orlando, FL
@ 8:00 a.m.

The pediatric and adolescent gynecology elective treats pediatric gynecologic disorders such as vaginitis, pelvic pain, and congenital anomalies. Students will gain experience in managing endocrine disorders such as polycystic ovary syndrome and provide contraception for adolescent girls with complicated medical problems such as lupus and autoimmune disorders, Crohn's disease, bleeding disorders and diabetes. Students will also be expected to understand and formulate treatment plans around menstrual cycle control options to children with special needs such as cerebral palsy and Down's syndrome. Students will participate in surgical treatment of endometriosis and ovarian cysts among pediatric and adolescent patients.

Objectives:

1. Patient Care: The student is expected to observe and become an active team member of patient care. The student will have the opportunity to become an active member of the patient care process across multiple clinical teams when evaluating patients for breast disease as the multidisciplinary teams organize to deliver optimum quality care.
2. Medical Knowledge: Students are expected to demonstrate knowledge of established and evolving clinical, epidemiological, and social-behavioral sciences and the application of this knowledge to patient care. Each clinical experience will be fully discussed with the student to help synthesize differential diagnosis and understand the interplay of medical therapeutics.
3. Practice Based Improvement: Students must demonstrate the ability to evaluate their patient care practices, appraise and assimilate scientific evidence and improve their patient care practices.
4. Inter-professional and Communication Skills: Students are expected to demonstrate interpersonal and communication skills that result in effective information exchange. They will be invited to explore ways to engage their patients and families and utilize resources in the hospital setting to communicate with non-English speaking patients.
5. Professionalism: Students are expected to learn about the standards of behavior such as: be in the moment, be authentic and humanistic, volunteer discretionary effort constantly, model high performance, respect and leverage separate realities, be curious vs. judgment, and strive to practice them in all interactions.
6. Systems Based Practice: Students are expected to demonstrate an awareness and responsiveness to the larger context and system of healthcare and ability to apply this knowledge to improve and optimize

Maximum Enrollment: 1 each block

This two or four week elective rotation, open to fourth year medical students, will provide a broad learning experience in pediatric infectious diseases. Learning will occur through direct provision of care to children requiring infectious diseases consultation at the Nemours Children's Hospital and at Nemours-associated clinics. Learning will also occur through formal and informal didactic presentations, bedside teaching, and through directed and undirected reading. The medical student will serve as an integral part of the care team, providing direct patient care under the supervision of the infectious diseases attending.

This rotation will emphasize diagnostic assessment through a detailed history, a careful physical examination, and appropriate use of laboratory studies. The rotation also emphasizes appropriate use of antimicrobial therapy, the understanding of host pathogen relationships, and the importance of social, emotional, physical, and medical legal issues that impact children with infectious diseases.

During the rotation, the medical student will, under the guidance of a supervising infectious disease physician, evaluate, examine, discuss, treat, and follow hospital inpatients and outpatients with proven or suspected infectious diseases, including, but not limited to, those with nosocomial infections, postoperative infections, trauma-related infections, septicemia, pneumonia, peritonitis, and infections in immunocompromised hosts, including patients with primary immunodeficiency syndromes, patients undergoing immunosuppressive therapy, and children and adolescents with HIV infection.

Objectives:

Medical students will demonstrate compassionate scientifically guided and effective care for the promotion of health, prevention of illness, and treatment of disease. Medical students must:

1. Demonstrate the ability to acquire and evaluate new information needed for the care of each patient.
2. Demonstrate the ability to perform meticulous physical examination of children across the age spectrum.
3. Demonstrate the ability to create comprehensive differential diagnoses that include both infectious and noninfectious etiologies for the patient's illness.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Pediatric Infectious Diseases continued

4. Analyze accurately and apply available information to make appropriate diagnostic decisions and therapeutic plans.
5. Demonstrate the ability to create and evaluate patient management plans for children with infectious diseases.

Medical Knowledge

Medical students must demonstrate proficiency and obtaining new knowledge through didactic lectures discussions on rounds, a signed and unguided readings, use of the internet, and consultation with colleagues. Students will apply an open-minded, analytical approach to acquire a new knowledge, and will assess their knowledge critically through continued use of the medical and scientific literature. Students will also apply new knowledge to clinical problem solving and to clinical decision making.

1. Describe the pathogenesis, clinical presentation diagnostic approaches to infections encountered in children in the inpatient and outpatient settings.
2. Describe the appropriate use of diagnostic procedures and laboratory tests to evaluate and monitor children with suspected or proven infections.
3. Demonstrate competence for the selection of appropriate antibiotics, and demonstrate the ability to provide appropriate recommendations for antimicrobial use and monitoring.
4. Demonstrate knowledge and skill in the critical assessment of complex clinical infectious diseases problems
5. Demonstrate knowledge of the appropriate, evidence-based management of inpatient and outpatient children with infectious diseases.
6. Demonstrate knowledge of approaches for diagnosis and management of proven and suspected infections in immunocompromised children.
7. Demonstrate an understanding of the rationale for and nature of infection control policies.
8. Demonstrate understanding of the variation in epidemiology of infectious diseases among different age groups, states immune function, socio-demographic groups, and geographic locations.

Practice Based Improvement:

Medical students are expected to evaluate and critically assess patient care practices, as well as appraise and disseminate clinical information. Students will also demonstrate an ability to learn from their own and others' mistakes

- Demonstrate proficiency in the use of the pediatric infectious diseases literature
- Apply up-to-date evidence-based information to address clinical questions and to guide medical therapy
- Evaluate their own performance, identifying gaps in their knowledge base, and target their self directed learning to improve performance and address knowledge gaps.
- Provide, request, and accept and incorporate feedback from all colleagues and from patients and their families
- Work with all members of the health care team to enhance team and knowledge and esprit de corps.

Interprofessional and Communication Skills:

Medical students are expected to demonstrate consistent interpersonal and communication skills that result in effective information exchange and support of families and colleagues.

- Demonstrate effective communication with the entire health care team
- Demonstrate effective communication with patients and their families

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Pediatric Infectious Diseases continued

- Demonstrate the ability to communicate crucial and appropriate information through written medical records and patient case presentations
- Demonstrate appropriate use of cultural and language interpreters as needed
- Demonstrate the ability to counsel and educate patients and their families in a comprehensive, supportive, and culturally-appropriate manner

Professionalism: Medical students are expected to practice consistently high-quality healthcare that is cost effective and beneficial to the patient within the context of the health care system.

- Always act in the best interest of the patient
- Demonstrate a caring and respectful demeanor when interacting with patients and their families
- Maintain patient and family confidentiality
- Demonstrate sensitivity to ethical principles, culture, age, gender, religious belief, sexual orientation, and a disability
- Be punctual, reliable, and conscientious

Systems Based Practice: Medical students are expected to practice consistently high-quality healthcare that is cost effective and beneficial to the patient within the context of the health care system.

- Advocate for patients and their families as they navigate the complexities of the healthcare system
- Describe a role of the subspecialist in consultation
- Participate in multidisciplinary patient care activities
- Participate actively and regularly in educational and case management conferences
- Demonstrate knowledge of restrictions in public and private insurance and the ramifications of these restrictions in the care of patients

Maximum Enrollment: 1 each block

First Day: Contact Kallie Lowery

Kallie.lower@nemours.org a week before the start to confirm your start date, receive assignments for the rotation and for specific first day instructions. Report to Nemours Children's Hospital lobby @ 8:30 am for a tour and brief orientation.

This rotation is intended for students interested in but not excluding Pediatric Otolaryngology, Pediatrics, Family Medicine, Emergency Medicine, Critical Care, Allergy subspecialties, and Pulmonary subspecialties. Pediatric otolaryngologists are NOT pediatricians, but surgeons who completed 5 years of otolaryngology-head and neck surgical training, followed by surgical fellowship in pediatric otolaryngology. The rotation provides students opportunity to see children in clinic setting with common conditions such as snoring, sleep disordered breathing, nasal symptoms like congestion, runny nose, understand that "sinusitis" is over-diagnosed, learn about acute versus chronic otitis media, conductive versus sensorineural hearing loss and their impact on speech development, congenital anomalies of the head and neck, swallowing dysfunction, tracheostomy dependent children, and all ENT issues for healthy and medically complex children. Students will gain understanding of how Otolaryngologists work with primary care physicians to evaluate, diagnose, determine surgical candidacy, provide surgical risk and complication counseling, and treat these common conditions. Students will also have opportunity to see complex Otolaryngology care involving Neuro-otologic procedures such as cochlear implantation, airways procedures, and head and neck surgeries.

Otolaryngologists are also frequently involved in the care of children with complex medical conditions, so students will be exposed to children with Downs syndrome and other craniofacial syndromes and abnormalities and participate in complex medical decision making.

Students will be expected to become familiar with guidelines for medical treatment and surgical candidacy as set forth by national societies such as the AAP and AAO-HNS.

The student will be expected to attend educational conferences such as surgical grand rounds, journal clubs, morbidity and mortality conference, and aerodigestive multidisciplinary conference. The student will be expected to give an 8-10 minute case and topic presentation at least once during the rotation. We hope that by the end of the rotation, the student will become comfortable and competent with basic clinical skills specific to ENT, such as using otologic equipment with the microscope, performing nasal and laryngeal endoscopy, and understanding wound care.

Primary Faculty Supervisor: Dr. Christine Grissom

Contact Person: Dr. Christine Grissom

(407) 342 – 1255; cagrissom@bellsouth.net

Maximum Enrollment: 1 per block (None in December)

First Day: Report to 571 Haverty Court, Suite Y, Rockledge,
FL, 32955 @ 9:00 am

Goal is for the student to gradually assume increasing responsibility, under supervision, for the evaluation and evidence-based treatment of patients in the CMHC outpatient setting. The student will gain experience establishing a therapeutic alliance with a patient population of all ages, with a wide variety of psychiatric disorders with comorbidities, and arrange of acuity of treatment needs. Responsibilities may also include some limited teaching of 3rd year UCF COM medical students. The intern's hours will be Monday – Thursday 9:00am to 7:00pm, divided between the 2 CMHC sites. No on-call, no weekend duties.

Objectives:

1. Perform and document a complete psychiatric diagnostic evaluation, identifying psychopathology, and developing appropriate biopsychosocial evaluation (laboratory, radiologic, and psychological testing) and treatment plans. Once emphasis will be on establishment of a therapeutic alliance and rapport; during follow-up visits, the patient's progress and course (including any ordered laboratory studies), diagnoses, and treatment plan, will be assessed and revised as indicated, with appropriate documentation.
2. Appropriately utilize the indications for psychiatric hospitalization, considering presenting problem and its acuity, risk of danger to patient or others, community resources, and family support; when necessary, help implement the process of involuntary hospitalization.
3. Demonstrate the ability to appraise and assimilate scientific evidence, utilizing relevant databases of psychiatric evidence-based medicine, to improve patient care and teach 3rd year medical students rotating in Psychiatry.
4. Demonstrate interpersonal communication skills that result in the effective exchange of information and collaboration with patients, their families, and other health professionals and students.
5. Student will develop skills for patient transition to successful terminations of treatment when indicated, with appropriate documentation.

Learning Activities:

1. Daily supervised patient evaluation and treatment in the outpatient setting. Patient assessments and treatment plans/disposition will be presented and discussed with Dr. Grissom.
2. Attend multidisciplinary treatment team meetings.
3. Ongoing use of medical/scientific databases at point of care to ensure use of evidence-based medicine.

drbranch@pasadenavilla.com

Maximum Enrollment: 1 per block (Except September and November)

First Day: Report to 119 Pasadena Place, Orlando, FL
32803 @ 9:00 am

Goal is to assume responsibility for psychiatric intake assessments for Pasadena patients who have a wide variety of psychiatric disorders. Become familiar with the transitional program at Pasadena Villa which helps patients work on life skills. No on-call. No weekend duties.

Objectives:

1. Perform and document complete psychiatric diagnostic evaluations in a residential care setting. The patient population has a variety of various psychiatric disorders including Autism Spectrum Disorders.
2. Identify psychopathology and develop appropriate biopsychosocial evaluation and treatment plans.
3. Demonstrate good interpersonal and communication skills that results in effective exchange of information with patients, families, and the treatment team.
4. Demonstrate ability to review professional literature and utilize evidence-based medicine to improve patient care.
5. Demonstrate and apply knowledge of psychopharmacology topics in treatment planning and management.
6. Demonstrate an ability to monitor and document patient's clinical progress and update recommendations for treatment plan as indicated.

Learning Activities:

1. The student will present a topic in medication group to help the patients understand medications, side effects or mechanisms of actions.
2. The student will attend the transitional living and learning groups at Pasadena.
3. The student will participate in multidisciplinary treatment team meetings to provide feedback on assigned patients.
4. The student will prepare an in-service didactic presentation on relevant topic in Psychiatry to present to staff.
5. Informal discussions Dr. Branch of assigned readings.

ijgmd@aol.com

Contact person: Kimberly Murphy, Office Manager,

(407) 210-1320; kmurphy@compass-clinic.com

Maximum Enrollment: 1 each block by permission

First Day: Report to Compass Research, 100 W. Gore St.,
Orlando, FL @ 9:00 a.m.

The focus of the elective is to provide students an intensive exposure to evaluation and management of patients with neurodegenerative disease, with a focus on Alzheimer's dementia and Parkinson's disease. The clerkship director (Dr. Riggs) has fellowship-level training in these areas, and the primary faculty (Dr. Goodman) has over 20 years' experience in care and evaluation of these patients. The elective will take place in the context of patients referred for possible participation in clinical trials, and exposure to clinical trial methodology is an additional focus. No on-call duties, no weekend activity.

Objectives:

1. Demonstrate the ability to assess patients with neurodegenerative disease; generate a thorough differential diagnosis for such patients; plan initial diagnostic and treatment interventions; discuss eligibility for clinical trials.

Radiation Oncology Elective

MDE 8780

Part-time (2 weeks)

(HF) Health First Cancer Services

*This site is more than 50 miles from the COM

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Nanialei Golden

Contact Person: Dr. Nanialei Golden,

(321) 409-1956 ; nanialei@gmail.com

Maximum Enrollment: 2 per block

First Day: Report to Health First Cancer Services (HFCS)

1130 S. Hickory St., Ste A, in Melbourne, FL @ 8:00 am

Students will participate in all aspects of Radiation Oncology patient care from initial consultation and work up to simulation/treatment planning, radiation physics/dosimetry, and daily treatment. Students will gain an understanding of general cancer management from common to rare cancers. Depending on the types of cancer under treatment during the rotation, there may be opportunities to observe brachytherapy in the operating room or other special procedures. Students will attend weekly Multidisciplinary Tumor Board and weekly Radiation Oncology Chart Rounds.

Objectives:

1. Understand the role radiation plays in cancer management.
2. Expand clinical knowledge of cancer and its various treatment options.
3. Understand common radiation side effects, specific causes and their management. Dispel radiation myths.
4. Enhance bedside manner, potentially improve conversations skills in patient communication in difficult circumstances.
5. Cancer management requires the interaction of multiple specialties including Medical Oncology, Surgical Oncology, Gyn Onc, Radiology and Pathology. Students will be part of this interaction.
6. Understand how cancer can impact multiple body systems and how cancer management impacts other synchronous illnesses.

Learning Activities:

This rotation is entirely outpatient. Students will attend weekly Multidisciplinary Tumor Board and weekly Radiation Oncology Chart Rounds. Students will gain a general understanding of radiographic anatomy as it pertains to contouring cancer volumes, normal organ volumes and organs at risk of potential radiation damage. Literature review will be focused around patient population currently under treatment including the most common cancers (breast, prostate, lung).

First Day: Report to front desk of Orlando VAMC,

Radiology Administrative office at 8:00am. Look for

Marta Hill or Dr. Mediratta

This rotation is open to all M4s and is particularly suited to students who have completed a general radiology elective or plan to pursue a career in Radiology. The student will gain experience in this exciting field which will utilize all modalities of radiology (general radiography, ultrasound, fluoroscopy, nuclear medicine, CT, and MRI). Students will participate in radiology procedures, readout of cases and weekly case presentations. There are no call or weekend responsibilities.

Rotations can be general diagnostic radiology which will give an overview of all modalities—or specialty-specific rotations (i.e. Angio-interventional Radiology, Pediatric Radiology, Neuroradiology, Nuclear Medicine, Cardiac Radiology, Body (MRI, CT, US, Oncology combined); Musculoskeletal Radiology, and Women's Radiology).

Objectives:

1. Understand the clinical radiographic indications for a variety of imaging modalities and examinations.
2. Understand the major procedure-specific activities of physicians and associated pediatric patient experiences for the differing image modalities.
3. Gain familiarity and develop basic interpretive and diagnostic skills regarding the radiographic appearance of common pediatric pathological processes for commonly utilized imaging modalities.
4. Develop basic skills required for the professional presentation of radiologic material for daily work rounds and weekly case conferences.

Maximum Enrollment: 1 per block

This course is designed to expose the student to patient assessment and Emergency Department management of a large number of patients entering a metropolitan Emergency Department and Pediatric Emergency Department. During this elective, the student will have responsibilities, supervision, and performance expectations comparable to that of a starting first year EM resident. Instruction is centered around bedside clinical supervision by faculty and residents in two busy Emergency Departments. A comprehensive didactic schedule is provided and includes conferences prepared for residents and students, as well as conferences designed exclusively for students. If available, there will be teaching time dedicated to the use of Ultrasound in the Emergency Medicine setting.

Objectives:

1. Perform an appropriate history and physical examination on pediatric, adult, and geriatric patients.
2. Recognize common, urgent, and emergent problems, and develop a differential diagnosis for these common presentations.
3. Interpret results of common lab studies, recognize basic ischemic patterns and arrhythmias on EKG tracings and interpret radiographs of the chest, abdomen, and extremities.
4. Recognize the indications for the specialty or subspecialty consultation and/or admission.
5. Apply real time data acquisition to patient management.

audra.gasko@usap.com; Lindsley Alida, (321) 422-

7171; lindsley.alida@usap.com

Maximum Enrollment: 1 each block

First Day: Contact Dr. Eugene Freid at (407) 686-5787,

Eugene.freid@usap.com one week before the start of the rotation for reporting instructions. Start time will be 6:30 am.

Under the supervision of attending physicians the 4th year student will participate in the care of patients requiring local, regional, and general anesthesia at various levels. Work hours will fall within current ACGME guidelines. In house call will not be a requirement.

Objectives:

1) Clinical Skills

All students completing this rotation will be able to demonstrate competency in:

- a) Insertion of an intravenous line
- b) Basic Airway Management—the student should be able to perform an airway exam, demonstrate proper use of oral/nasal airways, show different ways of delivering oxygen to patients, perform bag-mask and bag-endotracheal tube ventilation on patients, and demonstrate the ability to perform basic laryngoscopy / intubation, and atraumatic placement of laryngeal mask airway (LMA).

2) Didactics

All students completing this rotation will receive didactics on the following areas:

- a) Basic pharmacology of various anesthetic agents
- b) Airway Management:
 - a. Anatomy of the airway (adults vs. pediatric)
 - b. Airway assessment
 - c. Basic skills and tools to maintain ventilation and oxygenation
 - d. Outline the proper and safe way of inducing patients including rapid sequence inductions
 - e. Outline basic intubation techniques
 - f. Outline the Difficult Airway Algorithm
- c) The role of the anesthesiologist as a perioperative physician
 - a. Outline the important aspects of pre-operative assessment, risk stratification, and medical optimization of patients. Learn the ASA physical status classification.
 - b. Outline the critical aspects of intra-operative anesthetic management during induction, maintenance, and emergence from anesthesia. Learn the various non-invasive and invasive intra-operative monitors. Teach the basic concept of the anesthesia machine.
 - c. Outline the post-surgical care of patients including critical care and pain management.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Anesthesia Elective continued

- d) Problem Based Learning (PBL) Sessions
 - a. Students will be exposed to a series of PBL sessions designed to illustrate common clinical anesthesia problems.

Radiology/Anesthesiology/Emergency Medicine

Anesthesia Elective

Clerkship Director: TBD

MDE 8702 3

Full-time (2 weeks)

(VA) VA Lake Nona

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Tejash Dungarani

Tejash.Dungarani@va.gov

Contact person:

VHAORLMedicalEducationCoordinators@va.gov

Maximum Enrollment: 1 each block

First Day: On the first day, report to the 3rd floor OR at the Lake Nona VA @ 7:00 a.m. Please review the First Day Reporting Instructions document found on the M4 GPS site. Students should email Medical Education Coordinators to get computer access codes.

The University of Central Florida College of Medicine Selective in Anesthesia will introduce the student to evidence based care of the patient requiring surgery in an outpatient setting. They will have exposure to local, regional, or general anesthesia as well as the necessary preparation and care rendered in the preoperative and perioperative setting. The student will spend 2-4 weeks on the anesthesia service. Students will be responsible for the evaluation and workup of patients in the outpatient setting. There will also be opportunity for evaluation and assessment for patients receiving care for chronic pain. The student will be responsible for regular attendance. Students will be exposed to a series of practice based learning (PBL) sessions designed to illustrate common clinical anesthesia problems.

Objectives:

Medical Knowledge:

1. Begin to learn the fundamentals of anesthesiology as applied to surgery. Examples include the effect of induction agents, inhalation anesthetic agents, and muscle relaxants. Students should obtain an understanding of the effect of these agents on the respiratory physiology, circulatory physiology, and the fluid and electrolyte balance of the surgical patient. Evaluation of blood gas analysis and treatment of acid/base disorders.
2. Begin to understand the anesthesia preoperative exam and the concerns faced by the anesthesiologist when anesthetizing a surgical patient.
3. Understand the reasoning for ordering diagnostic laboratory procedures in the preoperative patients. Examples include liver function tests, serum chemistries, arterial blood gas analyses and hematologic profiles.
4. Begin to understand the different types of anesthetic care. *Examples include general anesthesia, spinal anesthesia, epidural anesthesia, and regional anesthesia and an understanding of when the various types of anesthetic care are indicated and which patients will benefit from regional versus general anesthesia.*
5. Begin to understand the commonly used anesthesia non-invasive monitors and the anesthesia machine.
6. Begin to understand the methods of securing/supporting an airway and associated complications.
 - a. Anatomy of the airway (adult vs. pediatric)
 - b. Airway assessment

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Anesthesia Elective—Continued

- c. Basic skills and tools to maintain ventilation and oxygenation
 - d. Outline the proper and safe way to inducing patients including rapid sequence inductions
 - e. Outline basic intubation techniques
 - f. Outline the Difficult Airway Algorithm
 - g. Perform a successful laryngoscopy and intubation on an adult with normal anatomy.
7. Begin to understand the medical procedural treatment of chronic pain syndromes.

Patient Care:

1. Perform pre-anesthetic physical examinations including specific knowledge regarding the patient's airway and possible need for advanced airway intubation techniques. Basic Airway management—the student should be able to perform an airway exam, demonstrate proper use of oral/nasal airways, show different ways of delivering oxygen to patients, perform bag-mask and bag-endotracheal tube ventilation on patients, and demonstrate the ability to perform basic laryngoscopy/intubation, and atraumatic placement of laryngeal mask airway (LMA).

Interpersonal Communication Skills:

1. Demonstrate skill and sensitivity when counseling and educating patients and their families in a variety of anesthesia options.
2. Work effectively with the health care team.
3. Present patients in a concise, organized, logical, and knowledgeable manner.
4. Exhibit honesty, reliability, good communication skills, and appropriate judgment.

Practice-Based Learning and Improvement:

1. Use textbooks and journal articles to learn principles of anesthesia as applied to surgery.
2. Attend department of surgery conferences.

Systems-Based Practice:

1. Understand the relationship and shared responsibilities between anesthesiologists and surgeons.

Professionalism:

1. Demonstrate adequate communications skills while dealing directly with patients.
2. Arrive in the OR on time, prepared for the procedure.

Procedures:

Under appropriate supervision, the student will have the opportunity to assist and at times perform basic anesthesia procedures such as:

- Tracheal intubation using different techniques
- Regional anesthesia, spinal and epidural
- Placement of intravenous lines

Primary Faculty Supervisor: Dr. Lisgelia Santana

lisgelia.santana@nemours.org

Contact person: Tiffany Baulkman, (407) 567-3224;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 1 each block

The fourth year rotation is designed to provide senior medical students with insights into the subspecialty of anesthesiology and the importance of the anesthesiologist in caring for patients prior to surgery, during surgery, and during the post-operative period. The rotation is hands-on and illustrates the role of the anesthesiologist in the clinical setting. During the rotation, students are assigned to an individual faculty mentor to guide them and be responsible for their daily clinical activities.

During the rotation, students become familiar with the many facets of the practice of anesthesiology, including the perioperative setting, pre-anesthetic evaluation, inducing and maintain anesthesia during surgery, patient emergence from anesthesia and post anesthesia care. By the end of the rotation, it is expected that the medical student will have developed a knowledge base allowing them to identify and manage common pre-operative concerns facing anesthesiologists and surgeons; developed an awareness and appreciation of the importance of patient safety relative to the anesthesiologist and operative course to the patient; comprehend pharmacological dosing, effects, and complications related to various anesthetic techniques; acquire a basic facility with airway and ventilator manipulation; and be able to contribute substantially to the management of regional or general anesthetics under the supervision of a licensed anesthesiologist. Our rotation is an opportunity for the medical student to gain valuable experience and knowledge of the operating room setting. You will be exposed to the challenges faced by anesthesiologists and surgeons on a daily basis and how contribute to the provision of excellent patient care while coping with the demands of a busy clinical setting. You are also expected to attend Morbidity and Mortality lectures as well as Surgical Grand Rounds on the first and second Wednesday of each month. Also a brief powerpoint presentation is required at the end of the rotation. The medical student will also interact with the Pain Clinic once or twice during the rotation. This is a valuable educational opportunity not only for those students who are considering anesthesiology as a specialty career path, but also for those who want to develop practical skills and knowledge that can serve as a foundation for practice in other specialties.

Surgery

NOT CURRENTLY AVAILABLE: General Thoracic Surgery Elective

MDE 8900 3

Full-time (4 weeks)

(VA) Lake Nona VA

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Andrew Heller, Andrew.heller2@va.gov,
407-631-4714

Contact Person: Andrea Gelber

vhaorlmedicaleducationcoordinators@va.gov

Maximum Enrollment: 1 per block

First Day: Report to Department of Surgery, Room 4J106 @
7:30 am

The overall goal and objective of the rotation is to obtain an introduction to non-cardiac Thoracic Surgery. During this rotation, the students will be responsible for the day-to-day management of patients referred to Thoracic Surgery under the direct supervision of a thoracic surgeon. The rotation will provide education in the care and management of surgery patients including diagnosis, treatment decision making, presentation on rounds and appropriate documentation. The student is encouraged to present a case presentation at the end of their rotation.

Objectives:

Patient Care:

1. Demonstrate consistent skills in gathering accurate information from all sources, including medical interviews, medical records, and diagnostic/therapeutic procedure
2. Define principles of pre-operative evaluation for patients in thoracic surgery
3. Describe components of post-operative care for general thoracic surgery patients
4. Determine the management and treatment of different chest wall tumors
5. Describe the differential diagnosis of mediastinal masses.

Medical Knowledge:

1. Assess patients and base treatment decision making according to the type of chest disease.
2. Discuss the evaluation of benign and malignant non-cardiac diseases of the chest.
3. Recognize different treatment options based on tumor type, location and staging.
4. Discuss the causes and management of pleural effusions.
5. Determine of the management of a chylothorax
6. Discuss the management of and acute and chronic empyema

Practice Based Improvement:

1. Identify areas for improvement and implement strategies to enhance knowledge, skills, attitudes and processes of care.
2. Analyze and evaluate practice experiences and implement strategies to continually improve

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

M4 Clerkship in General Thoracic Surgery continued

the quality of patient practice.

3. Develop and maintain a willingness to learn from errors and use errors to improve the systems or processes of care.
4. Demonstrate the ability to use information technology or other available methodologies to access and manage information, support patient care decisions and enhance both patient and physician education.

Interprofessional and Communication Skills:

1. Provide effective and professional consultation to other physicians and health care professionals and maintain therapeutic and ethically sound professional relationships with patients, their families, and colleagues.
2. Demonstrate proficiency in documenting patient's history, physical findings and plans of care in a concise note using the electronic health record.
3. Demonstrate the ability to effectively communicate information to patients and family members concerning diagnosis and plans for care in a compassionate and appropriate manner.

Professionalism:

1. Demonstrate respect, compassion, integrity, and altruism in relationships with patients, families and peers.
2. Demonstrate respect for cultural differences, religious beliefs and other personal qualities of their patients, families and peers.
3. Adhere to principles of confidentiality, academic and scientific integrity and informed consent.

Systems-Based Practice:

1. Access and utilize the resources, providers and systems necessary to provide optimal care.
2. Recognize the limitations and opportunities inherent in various practice types and delivery systems, and develop strategies to optimize care for the individual patient.
3. Apply evidence-based, cost-conscious strategies to diagnosis and disease management.
4. Advocate for patients and their families and help them navigate the medical system complexities.

Learning Activities

1. Initial Consultation/consenting process
2. Assist in the operating room
3. Participate in daily rounds both in the ICU and surgical wards.

Additional Information: All recommended reading materials will be provided. Suggested reading materials include: Thoracic Surgery Atlas, Ferguson, Mark K. Saunders/Elsevier, 2007, Sabiston & Spencer surgery of the Chest, Ninth edition. Selke, Frank W., Adult Chest Surgery, Second Edition. / Sugarbaker, David J. Mc Graw-Hill Medical, 2015

The medical student will be evaluated by his/her engagement in the entire learning opportunity including presentations, preparedness for clinic, and overall participation and engagement in the rotation. There will be a formal feedback session at mid-term and at the end of the rotation. Feedback for continuous improvement will be provided throughout the rotation. A final evaluation will be provided at the completion of the rotation.

Clinical Elective in Vascular Surgery

MDE 8605 3

Full-time (4 weeks)

First Day: Report to the Lake Nona VA Vascular Surgery Clinic Room 3G-902 @ 8:00 am. Please review the First Day Reporting Instructions document found on the M4 GPS. Students should email Medical Education Coordinators to get computer access codes. (VA) VA Lake Nona

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Frederick Fisher

Contact Person: (407) 629-1599 x1143;

VHAORLMedicalEducationCoordinators@va.gov

Maximum Enrollment: 2 per block

Goal of clinical elective is to expose fourth year medical students to the vast array of vascular disease seen at a busy Veterans Administration Hospital including the risk factors for disease, clinical presentation, and treatment modalities. The risk factor modification for these patients with multiple medical co morbidities will be stressed. The history and physical findings will be the cornerstone of the workup for these patients with appropriate laboratory and radiologic studies based on the findings. Treatment options will include non-surgical approaches, minimally invasive approaches and surgical approaches. Since these patients have multiple organ systems affected by their diseases, the students will need to integrate many of the disciplines they have learned over the first three years of medical school training. This will give the students an early opportunity to sharpen clinical skills in history taking, physical diagnosis, and decision making. These skills have a broad application to all fields of medicine, so elective is appropriate to students interested in surgery or non-surgical fields.

The radiology department works closely with the vascular surgery department so the student will have ample opportunities to review studies in radiology. The students will follow their patients to the operating room and the PACU to further their learning of the disease process.

The student will be given the opportunity to create a presentation of one or two patients to the members of the department at either the multidisciplinary conference or the surgical conference. If the presentation warrants publication in a peer reviewed journal, then the student may go on to write a case report for submission with the assistance of the clerkship director.

Initially there will be no night or weekend activities. Once the VA hospital opens there will be opportunity to incorporate this into the program.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Clinical Elective in Vascular Surgery continued

Objectives:

1. Identify and respect patients' differences and expressed needs.
2. Listen to, clearly inform, and communicate well with patients.
3. Share decision making management with emphasis on disease prevention and wellness with a promotion of healthy lifestyles.
4. Use established and evolving clinical and basic science knowledge to further patient care.
5. Assimilate appropriate scientific evidence to improve patient care.
6. Improve communication skills regarding information transfer with patients and their families.
7. Maintain professional behavior with strict adherence to accepted ethical standards.

Learning Activities:

1. Patient care will include daily patient visits in clinic. Student will be given advance notice of specific type of clinical problems to prepare for the encounter. After each patient visit a review of appropriate history and physical including relevant radiologic studies will occur with the instructor.
2. Student will be present in operating room twice on most weeks.
3. Review of literature will be continuously stressed by the instructor.
4. Student will be given opportunity for case presentation as noted above.

Introduction to Trauma and Surgical Critical Care

MDE 8900 5

Full-time (4 weeks)

First Day: Report to Central Florida Regional Medical
Center Trauma Office @ 7:00 am.

(HCA) Central Florida Regional Hospital Sanford

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Pappas

Contact Person: (407) 924-7767; peterpappas52@gmail.com

Maximum Enrollment: 1 per block

Students will function as an integrated member of the trauma team at Central Florida Regional Hospital, a Florida Department of Health certified level II Trauma Center serving Seminole County and portions of Lake, Volusia and Brevard. Working with the trauma team, students will participate in ICU and Neurosurgical ICU rounds, floor rounds, trauma resuscitations, emergency room consults and follow-ups in the Trauma outpatient clinic. Patients will also be present for surgical interventions and procedures, including emergency surgery for trauma and general surgery as well as central line and chest tube placement.

Objectives:

1. Learn how to perform a history and physical exam for trauma patients
2. Learn the key aspects of the history and physical exam to identify common surgical diseases presenting to the emergency room
3. Learn appropriate examination of critically ill patients in the ICU setting
4. Develop skills for patient evaluation for follow up of complex injury in the clinic setting

Learning Activities:

1. Students will be embedded in the trauma team and work closely with faculty and team members. They will participate in ICU and floor rounds and observe trauma alerts, surgeries, and procedures. Additional clinical modules will expose students to emergency medicine, anesthesia and orthopedic and neurosurgical trauma care.
2. Lectures and workshops will be offered to supplement clinical experience, including modules on ventilator function, neuro critical care, hemorrhage control and intensive care unit monitoring. Students will also be exposed to the administrative, regulatory and financial aspects of modern trauma care.
3. At the completion of the rotation, students will present a capstone talk on a topic of interest to the faculty and trauma team.

Plastic Surgery 4th Year Elective

Clerkship Director: George Pope, M.D., FACS

MDE 8660 9

Full-time (4 weeks)

(PO) Orlando Plastic Surgery Center

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. George Pope

georgehpoppe@gmail.com

Contact person: Dr. George Pope

(407) 857-6261; georgehpoppe@gmail.com

Maximum Enrollment: 1-2 each block

First Day: Report to Orlando Plastic Surgery Center,
3872 Oakwater Circle, Orlando 32806 at 8:15 am.

Wear office attire or white coat.

Students will gain exposure to the diverse specialty of plastic surgery by working in office, operating room and hospital settings, (Orlando Health and Florida Hospital), with a number of private practice surgeons, whose differing interests will provide a broad exposure. Occasional weekend cases may exist if an attending is on ER call.

Objectives:

1. Understand basic principle of wound management, with emphasis on preservation of vital tissues and structures.
2. Demonstrate proficiency in basic suturing techniques.
3. Have a basic understanding of the broad specialty of plastic surgery.
4. Show competence in the evaluation of plastic surgery using a problem-based approach to formulate a surgical plan.

Orthopaedic Patient Care and Surgical Techniques

MDE 8603

Full-time (4 weeks)

(PO) Jewett Orthopaedic Clinic

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Michael Jablonski

Contact Person: Jeanetta Lawrence,

jlawrence@jewettortho.com; Susan Kemper,

skemper@jewettortho.com; Kendra Schanback,

kschanback@jewettortho.com

Maximum Enrollment: 4 per block

First Day: Determined on an individual basis. Contact Jeanetta Lawrence for instructions.

Program Overview:

1. Ability to collect/organize a meaningful history.
2. Ability to perform a thorough and accurate evaluation.
3. Ability to organize and access data.
4. Self learning.
5. Technical skills.
6. Interpersonal relations with patients/health team.

Objectives

Patient Care:

1. Identify, respect, and care about patient differences, values, preferences, and expressed needs.
2. Listen to, clearly inform, communicate with, and educate patients.
3. Share decision making and management.
4. Continuously advocate disease prevention, wellness, and promotion of healthy lifestyles, including a focus on population health.

Medical Knowledge:

1. Established and evolving biomedical, clinical, and cognate (e.g. anatomical, physiological, and social behavioral) sciences and the application of knowledge of patient care.

Practice-Based Learning and Improvement:

1. Involves investigation and evaluation of one's own patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

Interpersonal and Communication Skills:

1. That result in effective information exchange and teaming with patients, their families and other health professionals.

Professionalism:

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Orthopaedic Patient Care and Surgical Techniques continued

1. Commitment to carrying out professional responsibilities, adherence to ethical principles and sensitivity to a diverse population.

Systems-Based Practice:

1. Actions that demonstrate an awareness of and responsiveness to the larger context and system of health care and the ability to effectively call on system resources to provide care that is of optimal value.

Learning Activities:

1. Hospital rounds, patient assessment, surgical technique

Otolaryngology/Head and Neck Surgery

MDE 8590

First Day: Report to Orlando VA, 2D307 @ 7:30 am

Full-time (4 weeks)

(VA) Lake Nona VA

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Dennis Diaz, Dr. Bradley Johnson, Dr. Michael Lanser

Contact Person: Andrea Gelber; 407-631-2373

vhaorlmedicaleducationcoordinators@va.gov

Maximum Enrollment: 1 per block

The overall goal and objective of the rotation is to obtain an introduction to the field of Otolaryngology. During this rotation, the students will be responsible for the day-to-day management of patients referred to ENT clinic under the direct supervision of an otolaryngologist. The rotation will provide education in the care and management of ENT patients including diagnosis, appropriate courses of initial medical and surgical therapy and treatment of common disorders of the ear, nose, oral cavity and throat. Students will be expected to obtain a focused detailed history and perform an appropriate physical exam. The student will have the opportunity to observe possible procedural skills including shave biopsy, fine needle aspiration, suturing, biopsy, epistaxis management and office endoscopy.

Patient Care:

1. Demonstrate consistent skills in gathering accurate information from all sources, including medical interviews, medical records, and diagnostic/therapeutic procedures
2. Define components in the physical examination of patients in otolaryngology
3. Describe the management of common disorders of the ear, nose, oral cavity and throat
4. Define procedures performed in Otolaryngology such as shave biopsy, fine needle aspiration, office endoscopy

Medical Knowledge:

1. Assess patients and base treatment decision making according to type of otolaryngology disorder
2. Discuss the basic evaluation and management of patients referred for dizziness
3. Determine the evaluation and treatment for sleep apnea.
4. Discuss the assessment and management of common clinical conditions such as otorrhea/otalgia, sore throat, rhinitis/epistaxis, sinusitis
5. Describe the evaluation and treatment of neck and thyroid masses

Practice-Based Learning and Improvement:

1. Develop and maintain a willingness to learn from errors and use errors to improve the systems or processes of care

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Otolaryngology/Head and Neck Clerkship continued

2. Demonstrate the ability to use information technology or other available methodologies to access and manage information, support patient care decisions and enhance both patient and physician education

Interpersonal and Communication Skills:

1. Provide effective and professional consultation to other physicians and health care professionals and maintain therapeutic and ethically sound professional relationships with patients, their families, and colleagues
2. Demonstrate proficiency in documenting patient's history, physical findings and plans of care in a concise note using the electronic health record
3. Demonstrate the ability to effectively communicate information to patients and family members concerning diagnosis and plans for care in a compassionate and appropriate manner

Professionalism:

1. Demonstrate respect, compassion, integrity, and altruism in relationships with patients, families and peers
2. Demonstrate respect for cultural differences, religious beliefs and other personal qualities of their patients, families and peers
3. Adhere to principles of confidentiality, academic and scientific integrity and informed consent

Systems-Based Practice:

1. Access and utilize the resources, providers and systems necessary to provide optimal care
2. Recognize the limitations and opportunities inherent in various practice types and delivery systems, and develop strategies to optimize care for the individual patient
3. Apply evidence-based, cost-conscious strategies to diagnosis and disease management
4. Advocate for patients and their families and help them navigate the medical system complexities

Learning Activities:

After orientation and instruction on head and neck examination, participant is expected to attend daily didactic sessions as well as clinic and operating room experiences with assigned otolaryngology attending's.

Recommended Reading: 10 minute ENT consult by Djalilian, H. Other helpful textbooks: Essential Otolaryngology by Lee, KJ. These may be available for check out in the library. Didactic: "One Sheets," informative sheets on high yield topics and ENT rotation study guide

The medical student will be evaluated by his/her engagement in the entire learning opportunity including presentations, preparedness for clinic, and participation in educational conferences. There will be a formal feedback session at mid-term and at the end of the rotation. Feedback for continuous improvement will be provided throughout the rotation as well as immediate feedback on case presentations while in clinic as well as on with the completion of a brief written exam. A final evaluation will be provided at the completion of the rotation.

This rotation is intended for the student interested in orthopedic surgery, pediatrics, and pediatric or family practice sports medicine. This rotation will prove an opportunity to gain insight and experience with the diagnosis and management of orthopedic surgical disorders of childhood. It will provide an overview of pediatric orthopedic topics selected from topics required by national pediatric, family practice, and orthopedic residency programs. The medical student will be expected to be involved in the workup, diagnosis, treatment, and follow up of patients with a wide variety of pediatric orthopedic surgical diseases. The student will be involved with the patient evaluation in the emergency department, outpatient clinic, and inpatient setting. He/She will also be involved in daily inpatient rounds, outpatient clinic, minor procedures, as well as well as major operations. The student will be expected to present in the orthopedic surgery education conference weekly, attend grand rounds, journal clubs, and morbidity and mortality conference. Call will be 1 week day and 1 weekend day per rotation for 2 week elective, and 2 week days and 1 weekend day per rotation for 4 week electives.

Objectives:

Patient Care:

1. Recognize common pediatric orthopedic surgical problems and emergencies in children.
2. Recognize orthopedic surgical complications in children.
3. Assist with the workup of new patients in the emergency department, outpatient clinic, and inpatient setting.
4. Assist in preparing patients for discharge.

Medical Knowledge:

1. Learn the fundamentals of basic sciences in pediatric orthopedic surgery.
2. Learn pediatric orthopedic common diagnoses and their management.
3. Read for the operative cases and be prepared for the OR.
4. Understand the pathology of pediatric orthopedic diseases.
5. Understand diagnostic tests commonly used pediatric orthopedic patients.
6. Practice evidence-based medicine by reviewing the literature.

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Pediatric Orthopedic Surgery Elective continued

Practice Based Improvement:

1. Utilize a pediatric orthopedic surgery textbook and journal articles to study pediatric orthopedic diseases.
2. Document patient care activities in the medical chart in a timely fashion.
3. Utilize electronic educational resources.

Interprofessional and Communication Skills:

1. Learn to communicate well with families and children.
2. Learn to interact with the surgical team.
3. Work well with other members of the health care team.

Professionalism:

1. Continue life-long learning.
2. Maintaining confidentiality of patient information.
3. Maintain sensitivity to others' cultures, age, gender, and disabilities.
4. Maintain accountability for personal actions and decisions.

Systems-Based Practice:

1. Only communicate appropriately with families under the direction of Faculty.
2. Communicate with the health care team members about the surgical patients.

Learning Activities

The medical student will present in the weekly pediatric orthopedic surgery education conference. He/She will present in daily inpatient rounds, attend pediatric orthopedic surgery clinic, and participate in surgeries. He/She will also practice evidence-based medicine by performing literature searches on the pediatric orthopedic surgery diseases of their patients.

The primary objective of this rotation is to provide trainees with expanded clinical training in the areas of cleft, craniofacial, and pediatric oral and maxillofacial surgery. The day to day clinical practice of the program director is currently devoted to all phases of cleft lip and palate repair, craniofacial surgery for congenital malformations, skull base surgery, management of facial trauma, orthognathic surgery, pathology, and a variety of oral and maxillofacial procedures in medically compromised children.

Objectives:

1. The student will develop basic clinical skills in the evaluation, surgical repair and postoperative care of pediatric craniomaxillofacial surgery patients.
2. The student will gain exposure to the areas of primary cleft surgery and craniofacial procedures involving trans-cranial access.
3. The student will demonstrate ability to work as part of a team delivering treatment to pediatric patients with craniofacial disorders, including cleft lip and palate.

Advanced Clinical Anatomy

Clerkship Director: Andrew Payer, Ph.D.

MDE 8520 0

Full-time (2 or 4 weeks)
(UCF COM)

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Andrew Payer

Contact person: Andrew Payer,
andrew.payer@ucf.edu

Maximum Enrollment: 3 each block

First Day: Report to 411L UCF COM @ 9:00 a.m. At least one week prior to the elective, develop an outline of the goals and objectives that you would like to achieve and submit the outline to Dr. Payer for approval.

Primary goal of the elective is to provide medical students with the opportunity to study advanced clinical anatomy related to a medical specialty they anticipate applying for graduate medical education. The experience will involve cadaver dissections, literature survey and consulting with clinical specialists in the area they will be working on. The contact time is flexible and does not require any on call responsibility.

Objectives:

1. Demonstrate detailed anatomy, and anatomical variations in the area studied.
2. Describe the current knowledge of the anatomy in the area studied.
3. Relate and compare the anatomical knowledge with the current surgical approaches in the area studied.
4. Prepare and give a presentation to the supervising faculty member and assigned clinical faculty on the project outlined in the contract agreed upon at the beginning of the elective.

Narrative Medicine Elective

MDE 8048

Part-time (2 weeks)

(NCH) Nemours Children's Hospital Medical Library

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Olivia DiLeonardo, MLS,

Olivia.dileonardo@nemours.org

Contact Person: Tiffany Baulkman, 407-567-3876;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 1 per block

First Day: Report to Nemours Children's Hospital lobby
@ 8:30 am for a tour and brief orientation.

Student will be expected to participate in patient rounds; read/view and be prepared to discuss assigned readings (including short stories, essays, or poetry) and short films; actively participate in close reading exercises; write parallel chart entries (a parallel chart entry is a written, reflective account written by the student reflecting upon a patient encounter); elicit and transcribe patients illness narratives; respond to writing prompts developed by the preceptor; and lead a Narrative Medicine workshop for the M3 and M4 students assigned to NCH.

Goals of the Rotation:

- Student will learn about the history and development of Narrative Medicine and medical humanities. Student will be able to identify how humanities-related disciplines can "...enhance empathy, perspective-taking, openness to different viewpoints, and to prompt reflection on self, others, and the world." (Kumagai, 2014)
- Student will recognize the ability of the arts to "make strange": "...to trouble one's assumptions, perspectives, and ways of being in order to view anew the self, others, and the world, (which) may serve a critical educational function in the development of reflective, humanistic clinicians." (Kumagai, 2014)
- Students will be able to identify and describe the tenets of Narrative Medicine: attention, representation, affiliation (Charon, 20016)
- Student will learn to conduct close reading exercises using prose, poetry, essays, short films, photography, and works of art assigned by preceptor
- Student will participate in Pediatric Intensive Care (PICU), Neonatal Intensive Care (NICU), and Pediatric Hospitalist rounds with direct faculty preceptor supervision, and write parallel chart entries based upon patient encounters.
- Student will elicit a narrative from a patient, listen while the patients tells his/her story, and then transcribe the story, concentrating on capturing its essence. The student will then read his/her written version of the patient's story back to the patient. This experience will be conducted under the direct supervision of the faculty preceptor. This exercise has been shown to develop the skills of narrative competence and attentive listening, and ultimately result in enhanced affiliation with the patient the patient care experience from the patient perspective. (Chretien et al, 2015; Das Gupta, 0007; Kumagai, 2008)

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Narrative Medicine Elective continued

- Student will respond to writing prompts and actively participate in discussion of these written entries with preceptor.
- Student will choose a piece of short fiction (poetry or prose), short film, photographs, or work of art and lead a Narrative Medicine exercise for M3 and M4 students assigned to NCH, including a close reading, in-depth discussion, and response to a writing prompt under the direct supervision of the faculty preceptor.

Learning Activities

Student will participate in close reading and writing exercises daily, both scheduled with the preceptor as well as independently as directed by the preceptor. Student will participate in NICU, PICU, and Hospitalist rounds, elicit and transcribe patient illness narratives, and write reflectively about patient encounters. Student will actively participate in discussion of readings and his/her reflective writing. At the end of the course, student will lead a 1 and ½ hour Narrative Medicine workshop consisting of close reading exercises, discussion, and writing prompt. These workshops already occur as part of the UCF COM pediatric clerkship at Nemours Children's Hospital and are currently led by the preceptor, Olivia DiLeonardo.

Arts in Medicine Elective

MDE 8900

First Day: Contact Dr. Cendan

Full time (4 weeks)

(UCF COM) UCF College of Medicine

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Juan Cendan, juan.cendan@ucf.edu

Contact Person: Arvis Grier, 407-266-1105; arvis.grier@ucf.edu

Maximum Enrollment: 12 max. 8 minimum. Offered block 10 only.

Student will be required to develop their interpersonal relational skills through active engagement with the arts as determined by course supervisor.

Core objectives:

- Develop a greater understanding of the patient physician interaction by engaging the roles through improvisations, and
- Become familiar with the value of empathy in the physician patient interaction and consider arts as a way to explore and strengthen this core communication attribute.

Culinary Medicine

MDE 8900

First Day: Contact Dr. Karch

Full time (4 weeks)

(NCH) Nemours Childrens Hospital

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Robert Karch, rkarch@nemours.org

Contact Person: Tiffany Baulkman, (407) 567-3224;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 10 max/minimum.

Offered 3 blocks only TBD

Culinary Medicine is a unique approach to nutrition education that integrates medical nutrition therapy principles with culinary medicine techniques. The goal is to introduce future physicians to healthy nutrition and cooking principles and to develop their communication skills around nutrition so that patients and their families can more effectively incorporate nutrition and food preparation knowledge into their daily lives in their own home kitchens. Exposure to the Culinary Medicine elective will enhance medical students' awareness of the positive impact of nutrition and healthy cooking in preventing and treating diet-related illnesses such as obesity, diabetes and coronary heart disease. This unique nutrition education is based upon the culinary medicine curriculum developed at the Tulane school of Medicine. Community partners will include the Second Harvest Food Bank and TMCA of Central Florida. Students will learn culinary nutrition techniques from professional chefs and dietitians at the UCF Rosen College of Hospitality Management and then teach these concepts and techniques to community members of all ages to the community partners using on site kitchens and mobile kitchens.

Learning Activities:

1. Module 1: Introduction to Culinary Medicine, Sanitation, Mediterranean Diet
2. Module 2: Weight Management, Portion Control, Nutrition Labels, Healthy Breakfast preparation
3. Module 3: Fat, Texture, Increasing Fiber, Lunch Preparations
4. Module 4: Food Sensitivities and Allergies, Calcium and Osteoporosis, Mindfulness, Local Resources
5. Module 5: Protein, Amino Acids, Vegetarian Diet, Eating Disorders
6. Module 6: Renal Physiology, Hypertension, Sodium and potassium homeostasis, sodium reduction and flavor building.
7. Module 7: Carbohydrates, Diabetes, Snacking and desserts
8. Module 8: Pediatric Diet, Breastfeeding, Meal Planning, Baby Food, Kid friendly meals

MedU Course (CLIPP, SIMPLE, WISE, CORE, fmCASES)

MDE 8900

Part-time (2 weeks)

(UCF COM) UCF College of Medicine

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Colleen Moran-Bano

Contact Person: Ken Staack, Coordinator,

ken.staack@ucf.edu

Maximum Enrollment: Unlimited

First Day: Sign in to the course(s) for which you signed up and complete the cases by the end of the block.

This course will focus on one of the following MedU courses for a two-week elective: CLIPP (Pediatrics, CLIPP Culture in Health Care, CLIPP Medical Home), CORE Radiology, WISE-MD (surgery), fmCASES (family medicine) or SIMPLE (internal medicine). Students will utilize the online MedU virtual patient courses found at <http://www.med-u.org>. Each course contains 30+ interactive cases with links for additional learning. Many of the courses have formative multiple choice questions associated with each case.

Learning Activities

During this elective you will be able to work independently while completing every module in your selected course. Dr. Moran-Bano is available via email for any questions that you may have. You will not need to send in any documentation of your completion as Dr. Moran-Bano will be reviewing your course log through Med U's administrative access. This view enables her to see your time spent on each module or each case, your short answers within the cases and any posttest assessments (not all MedU courses have post case assessments.) When you have completed all of the cases/modules in your selected course, you will have completed the independent study. We are not currently using the summative MedU course assessments. If you are interested in taking the post course exam, please let Dr. Moran-Bano know and this can be set up but it will not affect your grade for the independent study.

If, for some unforeseen reason of which there seem to be many during the M4 year, you are unable to complete all modules within your elective block you must notify Dr. Moran-Bano to create a learning plan that will enable you to successfully complete the independent study. If you do not notify her and your coursework is incomplete at the time of evaluation, you could be at risk for receiving an incomplete grade or fail the course. Please communicate in a timely and professional manner.

Patient and Family Centered Care (PFCC) Elective

MDE 8124 7

Part-time (2 weeks)

(NCH) Nemours Childrens Hospital

Grading Basis: Pass/Fail

First Day: Report to Nemours Children's Hospital
lobby @ 8:30 am

Primary Faculty Supervisor: Dr. Jim DeGrado,

(407) 650-7423, James.Degrado@nemours.org

Contact person: *Tiffany Baulkman*, (407) 567-3224;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 1-2 each block

Patient and Family Centered Care (PFCC) philosophy and its practice demands that the patient and their families are engaged as active partners in their health care experience. The four main PFCC tenants call for care providers to engage families with respect, dignity, collaboration, open information sharing and meaningful participation. As such, students will be expected to actively participate in clinical care experiences ranging from participation in family centered patient rounds, walking with a patient through their care experience and actively participating in the Family Advisory Council meetings. The PFCC tenants above correlate directly with three of the AAMC's Entrustable Professional Activities (EPA) including: gathering a history, collaborating as a member of an interprofessional team, identification of system failures and subsequent ways to improve quality and safety of care delivery at bedside.

Goals:

- Students will review the relevant literature on PFCC and will be able to understand and discuss the basic tenants of PFCC.
- Student will participate in team huddles to understand the interplay between the different departments that serve to support care in the hospital.
- Student will actively participate in health teams (Social Work, Child Life and Chaplains) to understand their unique contribution to care delivery.
- Student will actively participate in family centered rounds to gain a unique perspective of attending physician, interprofessional teams and family and patient as partners in care.
- Student will work with the course preceptor and other subject matter experts in the review of relevant literature which expands on the clinical experiences engaged in this course.
- Student will improve their skills in observation and assessment of patient histories by actively observing and documenting the patients experience as they move through the care stream at Nemours Children's Hospital, Emergency Department and ambulatory clinics.
- Student will produce a summary paper which describes how their clinical elective experience and course literature reviewed impacted their personal care philosophy.

Contact Person: Kate Knowles, (407) 266-1105;

kate@ucf.edu; Dr. Shaikh, sshaikhmd@yahoo.com

Maximum Enrollment: 2 per block (Not available in all blocks)

First Day: Contact Dr. Shaikh at least one week before course begins. Contact Kate Knowles if there is no reply.

Students will be required to listen to an audio lecture series and complete assigned readings to be determined by course supervisor. Student will also be required to complete an examination based on the lecture series.

**Students are required to read the book *Medical Firsts: From Hippocrates to the Human Genome* by Robert E. Adler. It is available in the library for checkout and can also be purchased on Amazon.

**Students must also read two audio books: *Doctors: The History of Scientific Medicine Revealed Through Biography*; by Sherwin Nuland (Audio Series - 6 hours. A couple copies are available to check out from the library.) and *The Making of Modern Medicine* by the BBC (Audio Series - 7.25 hours).

Objectives:

- a. Develop an understanding of medical history from Hippocratic medicine to the sequencing of the human genome.
- b. Become familiar with medical history's significant figures and the impact they had on the evolution of medicine.
- c. Deepen understanding of illness and suffering through the perspective of medical history.
- d. Recognize the interrelationship between medicine, science, and society through history.

Learning Activities

Completion of the following assignments:

1. *Doctors: The History of Scientific Medicine Revealed Through Biography*; available at amazon.com or audible.com
2. *The Making of Modern Medicine* by the BBC (Audio Series – 7.25 hours)
3. Textbook: *Medical Firsts: From Hippocrates to the Human Genome* by Robert Adler, MD

Medical Spanish

MDE 8040

Full-time (4 weeks)

(UCF COM)

Grading Basis: Pass/Fail

First Day: *Access to Canopy Medical Spanish to be obtained from the COM library.* Clinical skills sessions will be scheduled 3 times per year and students are expected to participate in at least one.

Primary Faculty Supervisor: Dr. Judith Simms-Cendan

Contact Person: *Dr. Judith Simms-Cendan,*
(407) 266-1057; Judith.simms-cendan@ucf.edu

Maximum Enrollment: 20 max in blocks 6-10

****Students are required to attend an in-person practical session from 8:00 – 3:00 in the Clinical Skills Lab based on the block the student is registered in. Dates are not negotiable.**

Blocks 1-6: TBA

Block 7: TBA

Blocks 8-11: TBA

Goals of the Rotation:

1. Students will have improved knowledge of Spanish grammar and medical Spanish vocabulary.
2. Students will learn how Latino culture affects access and utilization of health care.
3. Students will become familiar with correct use of a medical interpreter.
4. Students will practice use of medical Spanish in the clinical skills center.

Objectives:

1. Improved knowledge of role of culture in care of patients will enhance patient care.
2. Assessing skills in language will define safety limits in relying on personal medical Spanish knowledge.
3. Enhanced knowledge of medical Spanish will improve communication ability.
4. Understanding correct use of an interpreter will improve professionalism.
5. Understanding the role of the interpreter and laws requiring access to interpreter will improve systems based practice knowledge.

Learning Activities

1. Students are expected to work independently on Canopy models. You must request access from the COM library.
2. They are expected to attend the session in the clinical skills center, and sessions on use of an interpreter and practical medical Spanish.
3. A literature review and brief essay (1-2 pages) on the role of culture in medical care is required.

Clinical Anatomy Teaching Elective

Clerkship Director: Andrew Payer, Ph.D.

MDE 8093 0

Full-time (2 or 4 weeks)
(UCF COM)

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Andrew Payer

Contact person: Dr. Payer, Andrew.Payer@ucf.edu

Maximum Enrollment: 8 each block (Blocks 5-9 only)

First Day: Report to 411 L UCF COM @ 9:00 a.m.

Contact Dr. Payer one week prior to the start of the elective to get a list of the sessions you will be attending and preparing for the Structure and Function module.

Students will participate as teaching assistants in the Structure and Function Module for the four week period of their elective. They will need to prepare for the anatomical/physiological areas being covered in the respective component of the HB-2 module during their elective period. They will be required to be prepared to discuss with the M-1 students the relevant anatomy/physiology and medical imaging of the area being studied. They will attend all anatomy/histology/physiology/medical imaging laboratory/simulation sessions. They will also assist the M-1 students with their cadaver/autopsy report data and provide support for students having difficulties in the areas being studied.

Objectives:

1. Prepare pro-section anatomy dissections for demonstration to M-1 students.
2. Attend all anatomy/histology/physiology/medical imaging laboratory/simulation sessions.
3. Demonstrate knowledge of the anatomy/physiology/histology and medical imaging of the areas being studied in the elective
4. Assist M-1 students having academic difficulties with anatomy
5. Assist M-1 students' knowledge of clinical anatomy

Interventional Pain Medicine/PM & R

Clerkship Director: Avi Bhandary

MDE 8900 0

Full-time (4 weeks)
(PO) Private Office

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Avi Bhandary

Contact person: Jill Olsen, jill@flpatientcare.com

Maximum Enrollment: 1 each block

First Day: Report to 7984 Forest City Rd, Suite 104,
Orlando, FL 32810 at 8:00 a.m.

The rotation is a unique look at private practice in the subspecialty of Interventional Pain Medicine. The rotation will focus on cultivating the student's business acumen while providing a comprehensive clinical experience. With the landscape of outpatient medicine changing, students will also learn the importance of quality measures, and financial accountability while creating outcome based care plans.

By the end of the rotation, students will gain an insight into the demands of private practice/professionalism/ clinical skills and fluoroscopically based injection therapy as it relates to the restoration of functionality.

Objectives:

1. Recognize contributing comorbidities as they relate to primary diagnosis's
2. Understand the importance of conceptual thinking in procedural therapy
3. Describe therapeutic effects, contraindications of pharmacology used in pain medicine
4. Understand radiation safety as it relates to fluoroscopy
5. Learn the basic structures of the spine
6. Learn basic reading ability of spine MRI's
7. Learn the pharmacokinetics of steroids
8. Develop the ability to analyze medical journals

Emergency Ultrasound Elective

MDE 8773

First Day: Report to Florida Hospital East @ 8:00 am

Part-time (2 weeks)

(FH) Florida Hospital East Orlando

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Alfredo Tirado-Gonzalez

Contact Person: Katherine Bradford, (407) 303-6413;

Katherine.bradford@flhosp.org

Maximum Enrollment: 1 per block

The primary goal for the emergency ultrasound point of care elective is to provide the knowledge, skill, and experience to perform focused bedside ultrasound (US) examinations as a means to provide immediate information and answer specific questions about patients' physical conditions and care.

Objectives:

Patient Care: Gather accurate, essential information in a timely manner from all sources, including medical interviews, physical examinations, medical records, and diagnostic/therapeutic procedures. Integrate diagnostic information and generate an appropriate differential diagnosis.

Medical Knowledge: Understand the basic principles of medical ultrasonography with the potential risks and benefits to the patient. Demonstrate the ability to appropriately use the ultrasound machine to obtain basic images. Demonstrate the ability to identify basic ultrasound anatomy. Understand the appropriate use of ultrasound in the diagnosis of common medical problems. Demonstrates adequate foundation of knowledge in US applications: FAST, Aorta, Renal, First Trimester Bleeding, Echo, Gallbladder, and Procedural ultrasound.

Practice Based Improvement: Locate, appraise, and assimilate evidence from scientific studies related to the health problems of their patients. Use information technology to manage information, access online medical information, and support their own education.

Interprofessional and Communication Skills: Demonstrate the ability to respectfully, effectively, and efficiently develop a therapeutic relationship with patients and their families. Demonstrate effective participation in and leadership of the health care team.

Professionalism: Arrive on time and prepared to work. Demonstrate appropriate use of symptomatic care. Treat patients/family/staff/paraprofessional personnel with respect. Protect staff/patient's interests/confidentiality. Accept responsibility/accountability for patient care activities.

*This site is more than 50 miles from the COM

Grading Basis: Pass/Fail

Primary Faculty Supervisors: Dr. James Solomon

drjsolomon@ameridermresearch.com

Contact person: Sandra Davis, Office Manager

(386) 523-0768; sdavis@ameridermresearch.com

Maximum Enrollment: 1 each block

First Day: Report to 725 West Granada Blvd., Suite 44,
Ormond Beach, FL 32174 @ 9:00 a.m.

The student is exposed to one of the largest group dermatology practices in the country. The practice has over 50 office sites in 50 cities in Florida. Opportunities to work in several offices will expose the student to almost all aspects of diagnosis and treatment within general dermatology (pediatric to geriatric), surgical dermatology (routine, Moh's, laser), and cosmetic dermatology (lasers, fillers, cosmetic surgery, hair transplantation, aesthetic services), and dermatopathology. The student, with the help of the office manager, will arrange weekly rotations through several offices to provide the broadest experience possible. No night call or weekends required.

Objectives:

1. The student will gain his/her dermatology basic clinical knowledge and ability to communicate, discuss cases and interact with staff, patient in an intelligent and thoughtful way, and responds to clinical questions appropriately as knowledge of the field increase.
2. The student learns about skin and sun safety as well as the importance of evaluating the whole patient and discussing risk-taking behaviors.
3. The student learns to assist in basic dermatologic surgery procedures as well as gains understanding of more complex surgical procedures (Moh's surgery and cosmetic closures), and laser surgery.
4. The student is exposed to the broad spectrum of dermatology specific medications and completes the rotation with a basic dermatology treatment armamentarium.

The student gains an understanding in which cosmetic dermatology is used as a methodology to enhance the appearance of the skin by repairing damage done through sun, trauma and/or skin disease.

Grading Basis: Pass/Fail

Primary Faculty Supervisors: Robert Phillips, DPM;

Robert.Phillips9@va.gov

Contact person: (407) 432-8468

VHAORLMedicalEducationCoordinators@va.gov

First Day: Report to Lake Nona VA, Module 3F @ 7:00 a.m. Please review the First Day Reporting Instructions document found on the M4 GPS. Students should email Medical Education Coordinators to get computer access codes. Students should also send text to Dr. Phillips 3-5 days before the start of the rotation.

Maximum Enrollment: 1 each block (except 5A)

The student will be exposed to patients with all types of wounds. Most of the wounds will be located on the lower extremity. Diabetic ulcers will be heavily emphasized, though all types of wounds will be encountered, including decubitus ulcers, venous stasis ulcers, arteriosclerosis ulcers, surgical wounds and complications. In addition, the student will be exposed to the patient at high risk for developing ulcers as well as those who have finished healing a wound and are now being monitored for reoccurrence.

Objectives:

1. Demonstrate the ability to assess and care for adult patients in the outpatient setting, initially and in an ongoing fashion.
2. Demonstrate appropriate communication skills, with colleagues (oral and written presentations), patients and families.
3. Demonstrate professional behavior at all times.

Advanced ECG Self-Study Program

MDE 8227

First Day: UCF COM room 406P at 8:00 am.

Part-time (2 weeks)

(UCF COM) UCF COM and UCF Health Clinic

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Bernard Gros

Contact Person: Dr. Bernard Gros, 407-266-1180;

bernard.gros@ucf.edu

Maximum Enrollment: 2 per block (November through April only)

Note: This course requires some in person sessions with the instructor.

The primary goal of this rotation will be mastering the art and practice of clinical ECG interpretation. This will focus on the following areas: 1) The basics, 2) Myocardial abnormalities, 3) Conduction abnormalities, 4) Arrhythmias, 5) Narrow & wide complex tachycardias, 6) Paced rhythms, channelopathies and electrolyte disturbances.

Upon completion of this 2 week session, the students will have reviewed 400-600 case studies. This will provide them with a broad and in-depth understanding of ECG analysis and diagnosis.

Learning Activities:

1. Self study case reviews by student (Using Podrid's ECG Series)
2. Additional literature review ECG topics.
3. Weekly presentations to faculty on assigned ECG/Cardiovascular topics.
4. Weekly conference/faculty discussions to assist in instruction and understanding of ECG interpretation.

Required Texts:

- 1) Podrid's Real World ECG - Volume 1-4 (Volume 5-6 once released) - student will need to purchase to obtain additional access to online case files
- 2) Marriott's Practical Electrocardiography 12th edition

Maximum Enrollment: 1 each block (Not available in all blocks)

First Day: Report to Lake Nona Eye Clinic Room 2B @ 8:00 a.m. Report to the Retina Resident/Dr. Shaikh.

Please review the First Day Reporting Instructions and Course documents found on the M4 GPS site.

A 1-4 week rotation will be developed by the elective faculty and the student based on individual student goals. Core competencies to be achieved during the elective include general eye examination and ophthalmoscopic examination skills and exposure to ophthalmic surgery. For more advanced students or those available for longer time commitments, students will assist in ophthalmic surgical procedures, workup and presentation of ophthalmic cases to faculty and have the opportunity to present and or write a case report for publication. There are no weekend clinics outside of call. Call will be limited to accompanying staff to after-hours emergency evaluations (rare).

Objectives:

1. Achieve proficiency in the evaluation of patients with ocular disorders.
2. Establish familiarity within common eye conditions and their treatment.
3. Recognize ocular manifestations of systemic disease.
4. Become familiar with the clinical procedure ophthalmology.

Ophthalmology Research Elective

Clerkship Director: Michael Tolentino, M.D.

MDR 8550 9

Full-time (2-4 weeks)

(PO) Center for Retina & Macular Disease

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Michael Tolentino

Contact person: Dawn Sutherland, (863) 297-5400

x2032; dasu@crmd.net

Maximum Enrollment: 1 each block

First Day: Report to Center for Retina & Macular Disease, 250 Ave. K, SW, Suite 200 Winter Haven, FL @ 9:00 a.m.

Students will have the opportunity to observe the implementation of clinical trials at an ophthalmology subspecialty (retina) clinic. They will gain exposure to the various phases of clinical trials and how basic science research is applied in clinical practice. Students will observe clinical trial data collection and treatment administration. Students will participate in the examination of retinal patients and be introduced to advances in diagnostic and therapeutic technology. Students will also have the opportunity to design a retrospective clinical research project that could lead to publication. There will be no weekend or on-call activities. This elective will benefit those seeking future careers in ophthalmology or in other clinical subspecialties where an understanding of clinical research is important.

Objectives:

1. Achieve familiarity with clinical trials and how clinical trials are designed.
2. Understand the role the FDA plays in approving therapeutics and devices.
3. Develop additional experience with the funduscopy examination.
4. Recognize retinal manifestations of systemic disease.
5. Become familiar with the workings of a modern ophthalmology subspecialty (retina) practice.

Pediatric Nephrology Elective

Clerkship Director: Jorge Ramirez, M.D.

MDE 8445 7

Full-time (2-4 weeks)

(NCH) Nemours Children's Hospital & Nemours
Associated Clinics

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Robert Mathias

Contact person: Tiffany Baulkman, (407) 567-3876;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 1 each block

First Day: Report to Nemours Children's Hospital lobby
@ 8:30 am

This two or four-week elective rotation, open to fourth year medical students, will provide a broad learning experience in pediatric Nephrology. Learning will occur through direct provision of care to children requiring Nephrology consultation. Learning will also occur through formal and informal didactic presentations, bedside teaching, and through directed and undirected reading. The medical student will serve as an integral part of the care team, providing direct patient care as appropriate under the supervision of the Nephrology attending.

The overall goal of the Nephrology elective is to acquire an in-depth knowledge and experience with commonly encountered renal problems of infants and children. This elective also includes adequate time to pursue readings that focus on pathophysiology of disease processes. With this information as a background, the Medical student will acquire a good understanding of the management and long-term outcomes of common renal disorders in children.

During the rotation, the medical student will, under the guidance of a supervising Nephrology physician, evaluate, examine, discuss, treat, and follow hospital inpatients and outpatients with proven or suspected Nephrologic diseases, including, but not limited to, those with hematuria, proteinuria, hypertension, urinary tract infections, kidney stones, nephrotic syndrome, acute kidney injury, chronic kidney disorder, and kidney transplantation.

Maximum Enrollment: 1 each block

First Day: Report to Nemours Children's Hospital lobby
@ 8:30 am

The overall goal of this rotation is to provide a comprehensive program toward the recognition and management of major/common pediatric cardiology problems. Emphasis will be on the pathogenesis, pathophysiology, diagnosis and management principles of congenital and acquired heart disease in the young. Additional time will be spent on the understanding, recognition and management of pediatric cardiac rhythm disturbances and general pediatric cardiology issues.

Objectives:

1. Elicit a thorough and accurate history and performing comprehensive cardiovascular examination of neonates, infants, children and adolescents.
2. Detect significant heart disease through history and physical exam.

(407) 567-3868, Jason.lang@nemours.org

Contact person: Tiffany Baulkman, (407) 567-3224; tiffany.Baulkman@nemours.org

Maximum Enrollment: 1 each block

This clinical course will be based on basic respiratory physiology and will include a variety of clinical pulmonology experiences such as infectious disease of the lungs, hypersensitivity lung disease, cystic fibrosis, asthma, pulmonary reactions to chemical injury and trauma, radiologic evaluation of lung disease, pulmonary pathology, flexible bronchoscopy, pulmonary function testing, exercise physiology, sleep disordered breathing, apnea of prematurity/infancy, congenital disorders of the respiratory tract, home ventilation and chronic lung disease of infancy. Patient care and consultation experience will be gained on the inpatient services, intensive care units, and in the pediatric pulmonology clinic. In addition, the student will spend time in the pediatric pulmonary function and sleep laboratories.

Objectives:

1. Describe normal patterns of breathing in infants and children.
2. Demonstrate proficiency in the examination of the respiratory system.
3. Diagnose and treat asthma according to national guidelines.
4. Demonstrate proficiency in the management of children with cystic fibrosis.
5. Describe strategies for managing the complexities of the treatment of BPD.
6. Interpret basic pulmonary function testing in children.

Maximum Enrollment: 1 each block (None in June,
July, August, or September)

Exposure to many common pediatric skin diseases, some more rare congenital dermatoses. Importance of the dermatologic exam and the correct use of morphologic terminology and examination technique. Understanding of most common dermatoses. Most time in a pediatric outpatient clinic observing procedures including biopsies, lasers and minor surgeries. Opportunity to evaluate inpatients on the consult service with acute dermatologic issues. Journal discussions and Kodachromes will occur daily.

Objectives:

1. Become proficient in describing skin lesions
2. Basic understanding of acne and treatment regimens.
3. Recognition of atopic dermatitis, generate treatment plan.
4. Recognition of common skin infections in children.
5. Differentiation between infantile hemangiomas and vascular malformations.
6. Familiarity with nevi and congenital lesions.
7. Familiarity with some more common genodermatoses with appropriate workup.

Maximum Enrollment: 1 each block

This two or four week elective rotation, open to fourth year medical students, will provide a broad learning experience in pediatric infectious diseases. Learning will occur through direct provision of care to children requiring infectious diseases consultation at the Nemours Children's Hospital and at Nemours-associated clinics. Learning will also occur through formal and informal didactic presentations, bedside teaching, and through directed and undirected reading. The medical student will serve as an integral part of the care team, providing direct patient care under the supervision of the infectious diseases attending.

This rotation will emphasize diagnostic assessment through a detailed history, a careful physical examination, and appropriate use of laboratory studies. The rotation also emphasizes appropriate use of antimicrobial therapy, the understanding of host pathogen relationships, and the importance of social, emotional, physical, and medical legal issues that impact children with infectious diseases.

During the rotation, the medical student will, under the guidance of a supervising infectious disease physician, evaluate, examine, discuss, treat, and follow hospital inpatients and outpatients with proven or suspected infectious diseases, including, but not limited to, those with nosocomial infections, postoperative infections, trauma-related infections, septicemia, pneumonia, peritonitis, and infections in immunocompromised hosts, including patients with primary immunodeficiency syndromes, patients undergoing immunosuppressive therapy, and children and adolescents with HIV infection.

Objectives:

Medical students will demonstrate compassionate scientifically guided and effective care for the promotion of health, prevention of illness, and treatment of disease. Medical students must:

1. Demonstrate the ability to acquire and evaluate new information needed for the care of each patient.
2. Demonstrate the ability to perform meticulous physical examination of children across the age spectrum.
3. Demonstrate the ability to create comprehensive differential diagnoses that include both infectious and noninfectious etiologies for the patient's illness.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Pediatric Infectious Diseases continued

4. Analyze accurately and apply available information to make appropriate diagnostic decisions and therapeutic plans.
5. Demonstrate the ability to create and evaluate patient management plans for children with infectious diseases.

Medical Knowledge

Medical students must demonstrate proficiency and obtaining new knowledge through didactic lectures discussions on rounds, a signed and unguided readings, use of the internet, and consultation with colleagues. Students will apply an open-minded, analytical approach to acquire a new knowledge, and will assess their knowledge critically through continued use of the medical and scientific literature. Students will also apply new knowledge to clinical problem solving and to clinical decision making.

1. Describe the pathogenesis, clinical presentation diagnostic approaches to infections encountered in children in the inpatient and outpatient settings.
2. Describe the appropriate use of diagnostic procedures and laboratory tests to evaluate and monitor children with suspected or proven infections.
3. Demonstrate competence for the selection of appropriate antibiotics, and demonstrate the ability to provide appropriate recommendations for antimicrobial use and monitoring.
4. Demonstrate knowledge and skill in the critical assessment of complex clinical infectious diseases problems
5. Demonstrate knowledge of the appropriate, evidence-based management of inpatient and outpatient children with infectious diseases.
6. Demonstrate knowledge of approaches for diagnosis and management of proven and suspected infections in immunocompromised children.
7. Demonstrate an understanding of the rationale for and nature of infection control policies.
8. Demonstrate understanding of the variation in epidemiology of infectious diseases among different age groups, states immune function, socio-demographic groups, and geographic locations.

Practice Based Improvement:

Medical students are expected to evaluate and critically assess patient care practices, as well as appraise and disseminate clinical information. Students will also demonstrate an ability to learn from their own and others' mistakes

- Demonstrate proficiency in the use of the pediatric infectious diseases literature
- Apply up-to-date evidence-based information to address clinical questions and to guide medical therapy
- Evaluate their own performance, identifying gaps in their knowledge base, and target their self directed learning to improve performance and address knowledge gaps.
- Provide, request, and accept and incorporate feedback from all colleagues and from patients and their families
- Work with all members of the health care team to enhance team and knowledge and esprit de corps.

Interprofessional and Communication Skills:

Medical students are expected to demonstrate consistent interpersonal and communication skills that result in effective information exchange and support of families and colleagues.

- Demonstrate effective communication with the entire health care team
- Demonstrate effective communication with patients and their families

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Pediatric Infectious Diseases continued

- Demonstrate the ability to communicate crucial and appropriate information through written medical records and patient case presentations
- Demonstrate appropriate use of cultural and language interpreters as needed
- Demonstrate the ability to counsel and educate patients and their families in a comprehensive, supportive, and culturally-appropriate manner

Professionalism: Medical students are expected to practice consistently high-quality healthcare that is cost effective and beneficial to the patient within the context of the health care system.

- Always act in the best interest of the patient
- Demonstrate a caring and respectful demeanor when interacting with patients and their families
- Maintain patient and family confidentiality
- Demonstrate sensitivity to ethical principles, culture, age, gender, religious belief, sexual orientation, and a disability
- Be punctual, reliable, and conscientious

Systems Based Practice: Medical students are expected to practice consistently high-quality healthcare that is cost effective and beneficial to the patient within the context of the health care system.

- Advocate for patients and their families as they navigate the complexities of the healthcare system
- Describe a role of the subspecialist in consultation
- Participate in multidisciplinary patient care activities
- Participate actively and regularly in educational and case management conferences
- Demonstrate knowledge of restrictions in public and private insurance and the ramifications of these restrictions in the care of patients

First Day: Report to Nemours Children's Hospital Lobby @
8:30 am

The Pediatric Gastroenterology elective is designed to provide medical students with an opportunity for concentrated experience with a broad range of outpatient and inpatient care scenarios. Medical students will consolidate and enhance skills necessary for the prevention, primary care, and collaborative management of various digestive problems affecting children. These goals will be achieved through attaining key competencies in patient care, medical knowledge, practice-based learning and improvement, interpersonal communication skills, professionalism and system-based practice. The elective is available as either a two or four week rotation.

Objectives:

Patient Care: Medical students will demonstrate compassionate scientifically guided and effective care for the promotion of health, prevention of illness, and treatment of disease. Medical students must:

- Gather accurate and appropriate information for each patient encounter in which they participate via medical interviews, physical exam, chart review and discussion with other members of the medical care team.
- Develop an appropriate and thorough differential diagnosis for each patient seen.
- Analyze and apply available information to make appropriate diagnostic decisions and therapeutic interventions that are based on clinical judgment, scientific evidence, and patient preference.
- Develop, negotiate and implement appropriate management plans for children and adolescents with gastrointestinal disorders.
- Develop appropriate follow-up plans for children and adolescents with gastrointestinal disorders.

Medical Knowledge: Medical students must demonstrate proficiency and obtaining new knowledge through didactic lectures discussions on rounds, assigned and guided readings, use of the internet, and consultation with colleagues. Students will apply an open-minded, analytical approach to acquire new knowledge, and will assess their knowledge critically through continued use of the medical and scientific literature. Students will apply new knowledge to clinical problem solving and to clinical decision making.

Maximum Enrollment: 1 each block

First Day: Report to Nemours Children's Hospital lobby
@ 8:30 am

This rotation is intended for students interested in but not excluding Pediatric Otolaryngology, Pediatrics, Family Medicine, Emergency Medicine, Critical Care, Allergy subspecialties, and Pulmonary subspecialties. Children with common chronic conditions such as sleep disordered breathing, chronic sinusitis, otitis media, hearing loss, etc frequently require Otolaryngological care. With this rotation, we hope to provide insight into how Otolaryngologists work with primary care physicians to evaluate, diagnose, determine surgical candidacy, provide surgical risk and complication counseling, and treat these common conditions. Students will also have opportunity to see complex Otolaryngology care involving Neuro-otologic procedures such as cochlear implantation, airways procedures, and head and neck surgeries.

Otolaryngologists are also frequently involved in the care of children with complex medical conditions, so students will be exposed to children with Downs syndrome and other craniofacial syndromes and abnormalities and participate in complex medical decision making.

Students will be expected to become familiar with guidelines for medical treatment and surgical candidacy as set forth by national societies such as the AAP and AAO-HNS.

The student will be expected to attend educational conferences such as surgical grand rounds, journal clubs, morbidity and mortality conference, and aerodigestive multidisciplinary conference. The student will be expected to give an 8-10 minute case and topic presentation at least once during the rotation. We hope that by the end of the rotation, the student will be come comfortable and competent with basic clinical skills specific to ENT, such as using otologic equipment with the microscope, performing nasal and laryngeal endoscopy, and understanding wound care.

(407) 210-1320; kmurphy@compass-clinic.com

Maximum Enrollment: 1 each block by permission

First Day: Report to Compass Research, 100 W. Gore St.,
Orlando, FL @ 9:00 a.m.

The focus of the elective is to provide students an intensive exposure to evaluation and management of patients with neurodegenerative disease, with a focus on Alzheimer's dementia and Parkinson's disease. The clerkship director (Dr. Riggs) has fellowship-level training in these areas, and the primary faculty (Dr. Goodman) has over 20 years' experience in care and evaluation of these patients. The elective will take place in the context of patients referred for possible participation in clinical trials, and exposure to clinical trial methodology is an additional focus. No on-call duties, no weekend activity.

Objectives:

1. Demonstrate the ability to assess patients with neurodegenerative disease; generate a thorough differential diagnosis for such patients; plan initial diagnostic and treatment interventions; discuss eligibility for clinical trials.

Radiation Oncology Elective

MDE 8780

Part-time (2 weeks)

(HF) Health First Cancer Services

*This site is more than 50 miles from the COM

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Nanialei Golden

Contact Person: Dr. Nanialei Golden,

(321) 409-1956 ; nanialei.golden@health-first.org

Maximum Enrollment: 1 per block

First Day: Report to Health First Cancer Services (HFCS)

1130 S. Hickory St., Ste A, in Melbourne, FL @ 8:00 am

Students will participate in all aspects of Radiation Oncology patient care from initial consultation and work up to simulation/treatment planning, radiation physics/dosimetry, and daily treatment. Students will gain an understanding of general cancer management from common to rare cancers. Depending on the types of cancer under treatment during the rotation, there may be opportunities to observe brachytherapy in the operating room or other special procedures. Students will attend weekly Multidisciplinary Tumor Board and weekly Radiation Oncology Chart Rounds.

Objectives:

1. Understand the role radiation plays in cancer management.
2. Expand clinical knowledge of cancer and its various treatment options.
3. Understand common radiation side effects, specific causes and their management. Dispel radiation myths.
4. Enhance bedside manner, potentially improve conversations skills in patient communication in difficult circumstances.
5. Cancer management requires the interaction of multiple specialties including Medical Oncology, Surgical Oncology, Gyn Onc, Radiology and Pathology. Students will be part of this interaction.
6. Understand how cancer can impact multiple body systems and how cancer management impacts other synchronous illnesses.

Learning Activities:

This rotation is entirely outpatient. Students will attend weekly Multidisciplinary Tumor Board and weekly Radiation Oncology Chart Rounds. Students will gain a general understanding of radiographic anatomy as it pertains to contouring cancer volumes, normal organ volumes and organs at risk of potential radiation damage. Literature review will be focused around patient population currently under treatment including the most common cancers (breast, prostate, lung).

First Day: Contact Ms. Horvath two weeks before that start of rotation to confirm. Radiology Dept., 601 Rollins Ave., Orlando, FL @ 8:00 am

This rotation is open to all M4s and is particularly suited to students who have completed a general radiology elective or plan to pursue a career in Radiology. The student will gain experience in this exciting field which will utilize all modalities of radiology (general radiography, ultrasound, fluoroscopy, nuclear medicine, CT, and MRI). Students will participate in radiology procedures, readout of cases and weekly case presentations. There are no call or weekend responsibilities.

Rotations can be general diagnostic radiology which will give an overview of all modalities—or specialty-specific rotations (i.e. Angio-interventional Radiology, Pediatric Radiology, Neuroradiology, Nuclear Medicine, Cardiac Radiology, Body (MRI, CT, US, Oncology combined); Musculoskeletal Radiology, and Women's Radiology).

Objectives:

1. Understand the clinical radiographic indications for a variety of imaging modalities and examinations.
2. Understand the major procedure-specific activities of physicians and associated pediatric patient experiences for the differing image modalities.
3. Gain familiarity and develop basic interpretive and diagnostic skills regarding the radiographic appearance of common pediatric pathological processes for commonly utilized imaging modalities.
4. Develop basic skills required for the professional presentation of radiologic material for daily work rounds and weekly case conferences.

Anesthesia Elective

Clerkship Director: TBD

MDE 8702 3

Full-time (2 weeks)

(VA) VA Lake Nona

Grading Basis: Pass/Fail

Primary Faculty Supervisor: TBD

Contact person:

VHAORLMedicalEducationCoordinators@va.gov

Maximum Enrollment: 1-2 each block

First Day: On the first day, report to Orlando VA Medical Center, Pre Op holding area for main operating room @ 8:00 a.m. Please review the First Day Reporting Instructions document found on the M4 GPS site. Students should email Tejash.dungarani@va.gov to get computer access codes.

The University of Central Florida College of Medicine Selective in Anesthesia will introduce the student to evidence based care of the patient requiring surgery in an outpatient setting. They will have exposure to local, regional, or general anesthesia as well as the necessary preparation and care rendered in the preoperative and perioperative setting. The student will spend 2-4 weeks on the anesthesia service. Students will be responsible for the evaluation and workup of patients in the outpatient setting. There will also be opportunity for evaluation and assessment for patients receiving care for chronic pain. The student will be responsible for regular attendance. Students will be exposed to a series of practice based learning (PBL) sessions designed to illustrate common clinical anesthesia problems.

Objectives:

Medical Knowledge:

1. Begin to learn the fundamentals of anesthesiology as applied to surgery. Examples include the effect of induction agents, inhalation anesthetic agents, and muscle relaxants. Students should obtain an understanding of the effect of these agents on the respiratory physiology, circulatory physiology, and the fluid and electrolyte balance of the surgical patient. Evaluation of blood gas analysis and treatment of acid/base disorders.
2. Begin to understand the anesthesia preoperative exam and the concerns faced by the anesthesiologist when anesthetizing a surgical patient.
3. Understand the reasoning for ordering diagnostic laboratory procedures in the preoperative patients. Examples include liver function tests, serum chemistries, arterial blood gas analyses and hematologic profiles.
4. Begin to understand the different types of anesthetic care. *Examples include general anesthesia, spinal anesthesia, epidural anesthesia, and regional anesthesia and an understanding of when the various types of anesthetic care are indicated and which patients will benefit from regional versus general anesthesia.*
5. Begin to understand the commonly used anesthesia non-invasive monitors and the anesthesia machine.
6. Begin to understand the methods of securing/supporting an airway and associated complications.
 - a. Anatomy of the airway (adult vs. pediatric)
 - b. Airway assessment

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Anesthesia Elective—Continued

- c. Basic skills and tools to maintain ventilation and oxygenation
 - d. Outline the proper and safe way to inducing patients including rapid sequence inductions
 - e. Outline basic intubation techniques
 - f. Outline the Difficult Airway Algorithm
 - g. Perform a successful laryngoscopy and intubation on an adult with normal anatomy.
7. Begin to understand the medical procedural treatment of chronic pain syndromes.

Patient Care:

1. Perform pre-anesthetic physical examinations including specific knowledge regarding the patient's airway and possible need for advanced airway intubation techniques. Basic Airway management—the student should be able to perform an airway exam, demonstrate proper use of oral/nasal airways, show different ways of delivering oxygen to patients, perform bag-mask and bag-endotracheal tube ventilation on patients, and demonstrate the ability to perform basic laryngoscopy/intubation, and atraumatic placement of laryngeal mask airway (LMA).

Interpersonal Communication Skills:

1. Demonstrate skill and sensitivity when counseling and educating patients and their families in a variety of anesthesia options.
2. Work effectively with the health care team.
3. Present patients in a concise, organized, logical, and knowledgeable manner.
4. Exhibit honesty, reliability, good communication skills, and appropriate judgment.

Practice-Based Learning and Improvement:

1. Use textbooks and journal articles to learn principles of anesthesia as applied to surgery.
2. Attend department of surgery conferences.

Systems-Based Practice:

1. Understand the relationship and shared responsibilities between anesthesiologists and surgeons.

Professionalism:

1. Demonstrate adequate communications skills while dealing directly with patients.
2. Arrive in the OR on time, prepared for the procedure.

Procedures:

Under appropriate supervision, the student will have the opportunity to assist and at times perform basic anesthesia procedures such as:

- Tracheal intubation using different techniques
- Regional anesthesia, spinal and epidural
- Placement of intravenous lines

UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)

Electives

Surgery

Advanced Clinical Anatomy

Clerkship Director: Andrew Payer, Ph.D.

MDE 8520 0

Full-time (2 or 4 weeks)
(UCF COM)

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Andrew Payer

Contact person: Dr. Andrew Payer,
Andrew.payer@ucf.edu

Maximum Enrollment: 3 each block

First Day: Report to 411L UCF COM @ 9:00 a.m. At least one week prior to the elective, develop an outline of the goals and objectives that you would like to achieve and submit the outline to Dr. Payer for approval.

Primary goal of the elective is to provide medical students with the opportunity to study advanced clinical anatomy related to a medical specialty they anticipate applying for graduate medical education. The experience will involve cadaver dissections, literature survey and consulting with clinical specialists in the area they will be working on. The contact time is flexible and does not require any on call responsibility.

Objectives:

1. Demonstrate detailed anatomy, and anatomical variations in the area studied.
2. Describe the current knowledge of the anatomy in the area studied.
3. Relate and compare the anatomical knowledge with the current surgical approaches in the area studied.
4. Prepare and give a presentation to the supervising faculty member and assigned clinical faculty on the project outlined in the contract agreed upon at the beginning of the elective.

Pediatric Orthopedic Surgery Fourth Year Rotation

MDE 8485

Full-time (2-4 weeks)

(NCH) Nemours Children's Hospital

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. John Lovejoy, III,

john.lovejoy@nemours.org

Contact Person: Tiffany Baulkman, (407) 567-3224;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 1 per block

First Day: Report to Nemours Children's Hospital lobby @
8:30 am

This rotation is intended for the student interested in orthopedic surgery, pediatrics, and pediatric or family practice sports medicine. This rotation will prove an opportunity to gain insight and experience with the diagnosis and management of orthopedic surgical disorders of childhood. It will provide an overview of pediatric orthopedic topics selected from topics required by national pediatric, family practice, and orthopedic residency programs. The medical student will be expected to be involved in the workup, diagnosis, treatment, and follow up of patients with a wide variety of pediatric orthopedic surgical diseases. The student will be involved with the patient evaluation in the emergency department, outpatient clinic, and inpatient setting. He/She will also be involved in daily inpatient rounds, outpatient clinic, minor procedures, as well as well as major operations. The student will be expected to present in the orthopedic surgery education conference weekly, attend grand rounds, journal clubs, and morbidity and mortality conference. Call will be 1 week day and 1 weekend day per rotation for 2 week elective, and 2 week days and 1 weekend day per rotation for 4 week electives.

Objectives:

Patient Care:

1. Recognize common pediatric orthopedic surgical problems and emergencies in children.
2. Recognize orthopedic surgical complications in children.
3. Assist with the workup of new patients in the emergency department, outpatient clinic, and inpatient setting.
4. Assist in preparing patients for discharge.

Medical Knowledge:

1. Learn the fundamentals of basic sciences in pediatric orthopedic surgery.
2. Learn pediatric orthopedic common diagnoses and their management.
3. Read for the operative cases and be prepared for the OR.
4. Understand the pathology of pediatric orthopedic diseases.
5. Understand diagnostic tests commonly used pediatric orthopedic patients.
6. Practice evidence-based medicine by reviewing the literature.

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Pediatric Orthopedic Surgery Fourth Year Rotation continued

Practice Based Improvement:

1. Utilize a pediatric orthopedic surgery textbook and journal articles to study pediatric orthopedic diseases.
2. Document patient care activities in the medical chart in a timely fashion.
3. Utilize electronic educational resources.

Interprofessional and Communication Skills:

1. Learn to communicate well with families and children.
2. Learn to interact with the surgical team.
3. Work well with other members of the health care team.

Professionalism:

1. Continue life-long learning.
2. Maintaining confidentiality of patient information.
3. Maintain sensitivity to others' cultures, age, gender, and disabilities.
4. Maintain accountability for personal actions and decisions.

Systems-Based Practice:

1. Only communicate appropriately with families under the direction of Faculty.
2. Communicate with the health care team members about the surgical patients.

Learning Activities

The medical student will present in the weekly pediatric orthopedic surgery education conference. He/She will present in daily inpatient rounds, attend pediatric orthopedic surgery clinic, and participate in surgeries. He/She will also practice evidence-based medicine by performing literature searches on the pediatric orthopedic surgery diseases of their patients.

Patient and Family Centered Care (PFCC) Elective

MDE 8124 7

Part-time (2 weeks)

(NCH) Nemours Childrens Hospital

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Michael Campbell,

(407) 650-7423, Michael.campbell@nemours.org

Contact person: Tiffany Baulkman, (407) 567-3224;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 1-2 each block

Patient and Family Centered Care (PFCC) philosophy and its practice demands that the patient and their families are engaged as active partners in their health care experience. The four main PFCC tenants call for care providers to engage families with respect, dignity, collaboration, open information sharing and meaningful participation. As such, students will be expected to actively participate in clinical care experiences ranging from participation in family centered patient rounds, walking with a patient through their care experience and actively participating in the Family Advisory Council meetings. The PFCC tenants above correlate directly with three of the AAMC's Entrustable Professional Activities (EPA) including: gathering a history, collaborating as a member of an interprofessional team, identification of system failures and subsequent ways to improve quality and safety of care delivery at bedside.

Goals:

- Students will review the relevant literature on PFCC and will be able to understand and discuss the basic tenants of PFCC.
- Student will participate in team huddles to understand the interplay between the different departments that serve to support care in the hospital.
- Student will actively participate in health teams (Social Work, Child Life and Chaplains) to understand their unique contribution to care delivery.
- Student will actively participate in family centered rounds to gain a unique perspective of attending physician, interprofessional teams and family and patient as partners in care.
- Student will work with the course preceptor and other subject matter experts in the review of relevant literature which expands on the clinical experiences engaged in this course.
- Student will improve their skills in observation and assessment of patient histories by actively observing and documenting the patients experience as they move through the care stream at Nemours Children's Hospital, Emergency Department and ambulatory clinics.
- Student will produce a summary paper which describes how their clinical elective experience and course literature reviewed impacted their personal care philosophy.

Clinical Anatomy Teaching Elective

Clerkship Director: Andrew Payer, Ph.D.

MDE 8093 0

Full-time (2 or 4 weeks)
(UCF COM)

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Andrew Payer

Contact person: Dr. Andrew Payer,

Andrew.payer@ucf.edu

Maximum Enrollment: 8 each block (October,
November, December, and January only)

First Day: Report to 411 L UCF COM @ 9:00 a.m.

Contact Dr. Payer one week prior to the start of the
elective to get a list of the sessions you will be
attending and preparing for the Structure and Function
module.

Students will participate as teaching assistants in the Structure and Function Module for the four week period of their elective. They will need to prepare for the anatomical/physiological areas being covered in the respective component of the HB-2 module during their elective period. They will be required to be prepared to discuss with the M-1 students the relevant anatomy/physiology and medical imaging of the area being studied. They will attend all anatomy/histology/physiology/medical imaging laboratory/simulation sessions. They will also assist the M-1 students with their cadaver/autopsy report data and provide support for students having difficulties in the areas being studied.

Objectives:

1. Prepare pro-section anatomy dissections for demonstration to M-1 students.
2. Attend all anatomy/histology/physiology/medical imaging laboratory/simulation sessions.
3. Demonstrate knowledge of the anatomy/physiology/histology and medical imaging of the areas being studied in the elective
4. Assist M-1 students having academic difficulties with anatomy
5. Assist M-1 students' knowledge of clinical anatomy

Contact Person: Kate Knowles, (407) 266-1105;

kate@ucf.edu; Dr. Shaikh, sshaikhmd@yahoo.com

Maximum Enrollment: 4 per block (only blocks 5-9 and 11)

First Day: Contact Dr. Shaikh at least one week before
course begins. Contact Kate Knowles if there is no reply.

Students will be required to listen to an audio lecture series and complete assigned readings to be determined by course supervisor. Student will also be required to complete an examination based on the lecture series.

Objectives:

- a. Develop an understanding of medical history from Hippocratic medicine to the sequencing of the human genome.
- b. Become familiar with medical history's significant figures and the impact they had on the evolution of medicine.
- c. Deepen understanding of illness and suffering through the perspective of medical history.
- d. Recognize the interrelationship between medicine, science, and society through history.

Learning Activities

Completion of the following assignments:

1. Doctors: The History of Scientific Medicine Revealed Through Biography; available at amazon.com or audible.com
2. The Making of Modern Medicine by the BBC (Audio Series – 7.25 hours)
3. Textbook: Medical Firsts: From Hippocrates to the Human Genome by Robert Adler, MD

Narrative Medicine Elective

MDE 8048

Part-time (2 weeks)

(NCH) Nemours Children's Hospital Medical Library

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Olivia DiLeonardo, MLS,

Olivia.dileonardo@nemours.org

Contact Person: Tiffany Baulkman, 407-567-3876;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 1 per block

First Day: Report to Nemours Children's Hospital lobby
@ 8:30 am for a tour and brief orientation.

Student will be expected to participate in patient rounds; read/view and be prepared to discuss assigned readings (including short stories, essays, or poetry) and short films; actively participate in close reading exercises; write parallel chart entries (a parallel chart entry is a written, reflective account written by the student reflecting upon a patient encounter); elicit and transcribe patients illness narratives; respond to writing prompts developed by the preceptor; and lead a Narrative Medicine workshop for the M3 and M4 students assigned to NCH.

Goals of the Rotation:

- Student will learn about the history and development of Narrative Medicine and medical humanities. Student will be able to identify how humanities-related disciplines can "...enhance empathy, perspective-taking, openness to different viewpoints, and to prompt reflection on self, others, and the world." (Kumagai, 2014)
- Student will recognize the ability of the arts to "make strange": "...to trouble one's assumptions, perspectives, and ways of being in order to view anew the self, others, and the world, (which) may serve a critical educational function in the development of reflective, humanistic clinicians." (Kumagai, 2014)
- Students will be able to identify and describe the tenets of Narrative Medicine: attention, representation, affiliation (Charon, 20016)
- Student will learn to conduct close reading exercises using prose, poetry, essays, short films, photography, and works of art assigned by preceptor
- Student will participate in Pediatric Intensive Care (PICU), Neonatal Intensive Care (NICU), and Pediatric Hospitalist rounds with direct faculty preceptor supervision, and write parallel chart entries based upon patient encounters.
- Student will elicit a narrative from a patient, listen while the patients tells his/her story, and then transcribe the story, concentrating on capturing its essence. The student will then read his/her written version of the patient's story back to the patient. This experience will be conducted under the direct supervision of the faculty preceptor. This exercise has been shown to develop the skills of narrative competence and attentive listening, and ultimately result in enhanced affiliation with the patient the patient care experience from the patient perspective. (Chretien et al, 2015; Das Gupta, 0007; Kumagai, 2008)

**UNIVERSITY OF CENTRAL FLORIDA
COLLEGE OF MEDICINE
FOURTH YEAR (M4)**

Narrative Medicine Elective continued

- Student will respond to writing prompts and actively participate in discussion of these written entries with preceptor.
- Student will choose a piece of short fiction (poetry or prose), short film, photographs, or work of art and lead a Narrative Medicine exercise for M3 and M4 students assigned to NCH, including a close reading, in-depth discussion, and response to a writing prompt under the direct supervision of the faculty preceptor.

Learning Activities

Student will participate in close reading and writing exercises daily, both scheduled with the preceptor as well as independently as directed by the preceptor. Student will participate in NICU, PICU, and Hospitalist rounds, elicit and transcribe patient illness narratives, and write reflectively about patient encounters. Student will actively participate in discussion of readings and his/her reflective writing. At the end of the course, student will lead a 1 and ½ hour Narrative Medicine workshop consisting of close reading exercises, discussion, and writing prompt. These workshops already occur as part of the UCF COM pediatric clerkship at Nemours Children's Hospital and are currently led by the preceptor, Olivia DiLeonardo.

Ophthalmology/Pediatrics

Genetics and Dysmorphology

Clerkship Director: Colleen Moran-Bano, M.D.

MDE 8438 7

Part-time (2 weeks)
(NCH)

First Day: Report to Nemours Children's Hospital lobby
@ 8:30 am

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Patricia Wheeler

Patricia.wheeler@nemours.org

Contact person: Tiffany Baulkman, (407) 567-3224;

tiffany.Baulkman@nemours.org

Maximum Enrollment: 1 each block

Students will become familiar with the systematic approach to evaluating a patient with a known or suspected genetic, cytogenetic, metabolic or dysmorphic order.

Objectives:

1. Students will be able to perform a physical examination with emphasis on identifying and describing congenital anomalies and dysmorphic features.
2. Students will be able to elicit and construct three generation pedigree (family tree).
3. Students will become familiar with how genetic counselors and geneticists approach counseling for conditions with Mendelian inheritance patterns (autosomal dominant, autosomal recessive, and X-linked) and non-Mendelian inheritance patterns (mitochondrial, inheritance, multifactorial conditions and chromosomal abnormalities).
4. Students will become familiar with on-line resources that are available for physicians caring for patients with genetic disorders.
5. Students will become familiar with community resources and support groups for individuals and their families who have a genetic disorder.
6. Students will learn the common indications for referring a patient to genetic services.

MedU Course (CLIPP, SIMPLE, WISE, CORE, fmCASES)

MDE 8900

Part-time (2 weeks)

(UCF COM) UCF College of Medicine

Grading Basis: Pass/Fail

Primary Faculty Supervisor: Dr. Colleen Moran-Bano

Contact Person: Ken Staack, Coordinator,

ken.staack@ucf.edu

Maximum Enrollment: Unlimited

First Day: Sign in to the course(s) for which you signed up and complete the cases by the end of the block.

This course will focus on one of the following MedU courses for a two-week elective: CLIPP (Pediatrics, CLIPP Culture in Health Care, CLIPP Medical Home), CORE Radiology, WISE-MD (surgery), fmCASES (family medicine) or SIMPLE (internal medicine). Students will utilize the online MedU virtual patient courses found at <http://www.med-u.org>. Each course contains 30+ interactive cases with links for additional learning. Many of the courses have formative multiple choice questions associated with each case. Students choosing CLIPP, CORE, fmCASES, or SIMPLE will be required to complete and pass a summative assessment through MedU for successful completion of the course. These exams must be administered at College of Medicine before a grade for the elective can be assigned. The courses will be pass/fail.

Learning Activities

Student is responsible for completing the entire selected virtual patient course on line and completing any required assessment activities associated with the course.
